Anhang 4-G1: Zusatzanalysen, TULIP-1, TULIP-2, TULIP-1+TULIP-2, MUSE, TULIP-1+TULIP-2+MUSE, ITT-Population, nur in Deutschland zugelassene Medikamente

Contents

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Subject disposition and summary of treatment exposure
Full analysis set

		Anifrolumab 300mg (N=127)	Placebo (N=125)
Patients who completed the study		105 (82.7)	98 (78.4)
Patients withdrawn from the study		22 (17.3)	27 (21.6)
WITHDRAWAL BY SUBJECT		9 (7.1)	12 (9.6)
ADVERSE EVENT		8 (6.3)	3 (2.4)
LACK OF EFFICACY		3 (2.4)	6 (4.8)
OTHER		1 (0.8)	2 (1.6)
CONDITION UNDER INVESTIGATION WORSENED		1 (0.8)	1 (0.8)
LOST TO FOLLOW-UP		0	2 (1.6)
SEVERE NON-COMPLIANCE TO PROTOCOL		0	0
Duration of study (weeks)	n (missing)	127 (0)	125 (0)
	Mean (SD)	50.5 (11.28)	50.1 (11.44)
	Median	52.4	52.3
	Min, Max	0, 70	5, 70
Patients who completed investigational product		104 (81.9)	97 (77.6)
Patients discontinued investigational product		23 (18.1)	28 (22.4)
Withdrawal By Subject		10 (7.9)	10 (8.0)
Adverse Event		8 (6.3)	6 (4.8)
Lack Of Efficacy		2 (1.6)	6 (4.8)
Condition Under Investigation Worsened		1 (0.8)	4 (3.2)
Severe Non-Compliance To Protocol		0	1 (0.8)
Other		2 (1.6)	0
Lost To Follow-Up		0	1 (0.8)
Duration of exposure (weeks)	n (missing)	127 (0)	125 (0)
	Mean (SD)	46.7 (13.39)	46.5 (12.72)
	Median	52.1	52.1
	Min, Max	4, 55	4, 54
Number of Infusions	n (missing)	127 (0)	125 (0)
	Mean (SD)	11.3 (3.32)	11.4 (3.26)
	Median	13.0	13.0
	Min, Max	1, 13	1, 13
Subjects enrolled to the LTE study		89 (70.1)	83 (66.4)

Duration of study defined as time from randomization until end of participation date.
Duration of exposure defined as difference of date of first exposure to treatment and date of last exposure to treatment + 28 days.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Demographic and baseline characteristics
Full analysis set

	Mean (SD)	34.25 (25.494)	50.58 (28.701)	41.25 (27.648)
	Median	28.50	57.50	37.50
	Min, Max	5.0, 86.0	5.0, 90.0	5.0, 90.0
Complement CH50 level at baseline, categorisation (%)	Abnormal	16 (12.6)	12 (9.6)	28 (11.1)
	Normal	111 (87.4)	113 (90.4)	224 (88.9)

Baseline is defined as the last measurement prior to randomisation and dose administration on Day 1.
Only subjects with baseline positive anti-dsDNA and abnormal complement level, respectively, are included in the summary statistics for the respective variables.

For each outcome and visit, 100 imputations were generated by randomised treatment group. Each imputed dataset was analysed separately, and the single estimates are combined using PROC MIANALYZE. The estimated number of responders and non-responders are rounded to an integer. Therefore, there might be slight mismatches between number of subjects and corresponding percentage.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

	p-value	0.0061	

For each outcome and visit, 100 imputations were generated by randomised treatment group. Each imputed dataset was analysed separately, and the single estimates are combined using PROC MIANALYZE. The estimated number of responders and non-responders are rounded to an integer. Therefore, there might be slight mismatches between number of subjects and corresponding percentage.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany

	p-value	0.0284	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Week 52	Number of subjects with events, n (%)	55 (43.3)	41 (32.8)
	Analysis Anifrolumab 300mg vs. Placebo (stratified)		
	Relative Risk (95% CI)	1.32 (0.96, 1.82)	
	p-value	0.0847	
	Odds Ratio (95% CI)	1.56 (0.94, 2.59)	
	p-value	0.0872	
	Risk Difference (95% CI)	10.73 (-1.43, 22.89)	
	p-value	0.0838	
	Analysis Anifrolumab 300mg vs. Placebo (unstratified)		
	Relative Risk (95% CI)	1.32 (0.96, 1.82)	
	p-value	0.0890	
	Odds Ratio (95% CI)	1.57 (0.94, 2.61)	
	p-value	0.0867	
	Risk Difference (95% CI)	10.51 (-1.41, 22.42)	
	p-value	0.0840	
	CMH approach		
	Response rate	43.3	33.0
	Difference in response rates (95% CI)	10.37 (-1.60, 22.35)	
	p-value	0.0896	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)

Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

OVERALL	116	9.94 (1.97)	113	10.50 (1.95)	-0.56 (2.36)	(-5.21, 4.09)	0.8117	-0.03 (0.13)	(-0.29, 0.23)	0.8397

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)

Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Rates and rate ratio from negative binomial regression model with factors for treatment group and the stratification factors. The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.
p-Value for interaction from same negative binomial regression model with additional factors for subgroup and subgroup*treatment interaction.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)

The number of flares after withdrawal from study is imputed conditional upon the observed number of flares prior to the withdrawal, a post-withdrawal model assumption, the baseline covariates included in the main analysis model and the time the subject would have remained in the study if not withdrawn (ie, date of first administration of IP + 364 days â€“ date of withdrawal). This analysis is repeated multiple times and the results combined using Rubinâ€™s formula. Full details are given in SAP
Rates and rate ratio from negative binomial regression model with factors for treatment group and the stratification factors. The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.

1	0.1243	0.1352	0.1442	0.1515	0.1575	0.1622	0.1660
1.25	0.1536	0.1663	0.1768	0.1853	0.1921	0.1976	0.2020
1.5	0.1987	0.2139	0.2264	0.2365	0.2447	0.2511	0.2562

The response variable in the model is the number of flares up to Week 52/EDV. The model includes covariates of treatment group, and the stratification factors (SLEDAI-2K Score at Screening (<10 points vs >= 10 points), Week 0 OCS dose (<10 mg/day vs >=10 mg/day prednisone or equivalent) and Type 1 IFN test result at screening (high vs low)).
The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.
P-values of this analysis are presented.
For the scenario in the upper left corner, missing at random analysis is performed, where for each subject the rate after withdrawal y1 is assumed to be the same as their rate before withdrawal y2, which itself is calculated based on their randomised treatment group and baseline covariates. For the other scenarios, the same analyses are performed with the rate after withdrawal modified to be Deltay2 (Delta P and Delta A for placebo and anifrolumab 300 mg, respectively).

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Overall Survival
Full analysis set

	Anifrolumab 300mg (N=127)	Placebo (N=125)
Number of subjects with events, n (%)	1 (0.8)	1 (0.8)
Number of censored subjects, n (%)	126 (99.2)	124 (99.2)
Kaplan-Meier Quartiles of Time to Event (weeks)		
25%-ile (95% CI)	NE (NE, NE)	NE (NE, NE)
Median (95% CI)	NE (NE, NE)	NE (NE, NE)
75%-ile (95% CI)	NE (NE, NE)	NE (NE, NE)
Analysis Anifrolumab 300mg vs. Placebo (adjusted)		
Hazard Ratio (95% CI)	0.92 (0.06, 14.74)	
p-value	0.9624	
Analysis Anifrolumab 300mg vs. Placebo (unadjusted)		
Hazard Ratio (95% CI)	0.98 (0.06, 15.73)	
p-value	0.9907	

Kaplan-Meier estimate with 95% CI based on Brookmeyer-Crowley log(-log) transformation.
Hazard ratios, confidence intervals and 2-sided p-value are calculated from Cox proportional hazards model. Adjusted analysis also includes stratification factors in the model.
Two-sided log rank test used.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Kaplan-Meier median with 95% CI based on Brookmeyer-Crowley log(-log) transformation.
Hazard ratios, confidence intervals and 2-sided p-value are calculated from Cox proportional hazards model with factors for treatment and stratification factors.
Two-sided log rank test used.
p-Value for interaction from Cox proportional hazards model with factors for treatment, subgroup, treatment*subgroup interaction and stratfication factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
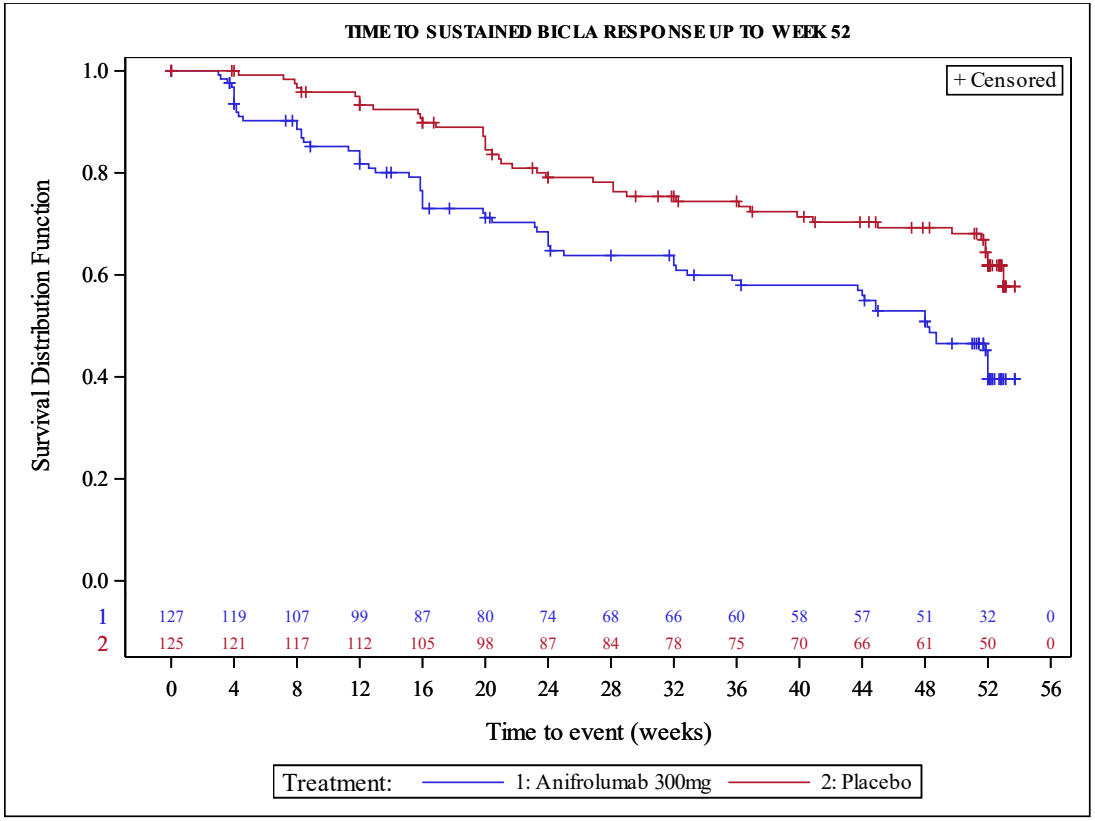
Kaplan-Meier Plot of Time to sustained BICLA response up to week 52
Full analysis set



Kaplan-Meier Plots for subgroups are generated if p-value for interaction <0.05

Anifrolumab (MEDI-546)

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
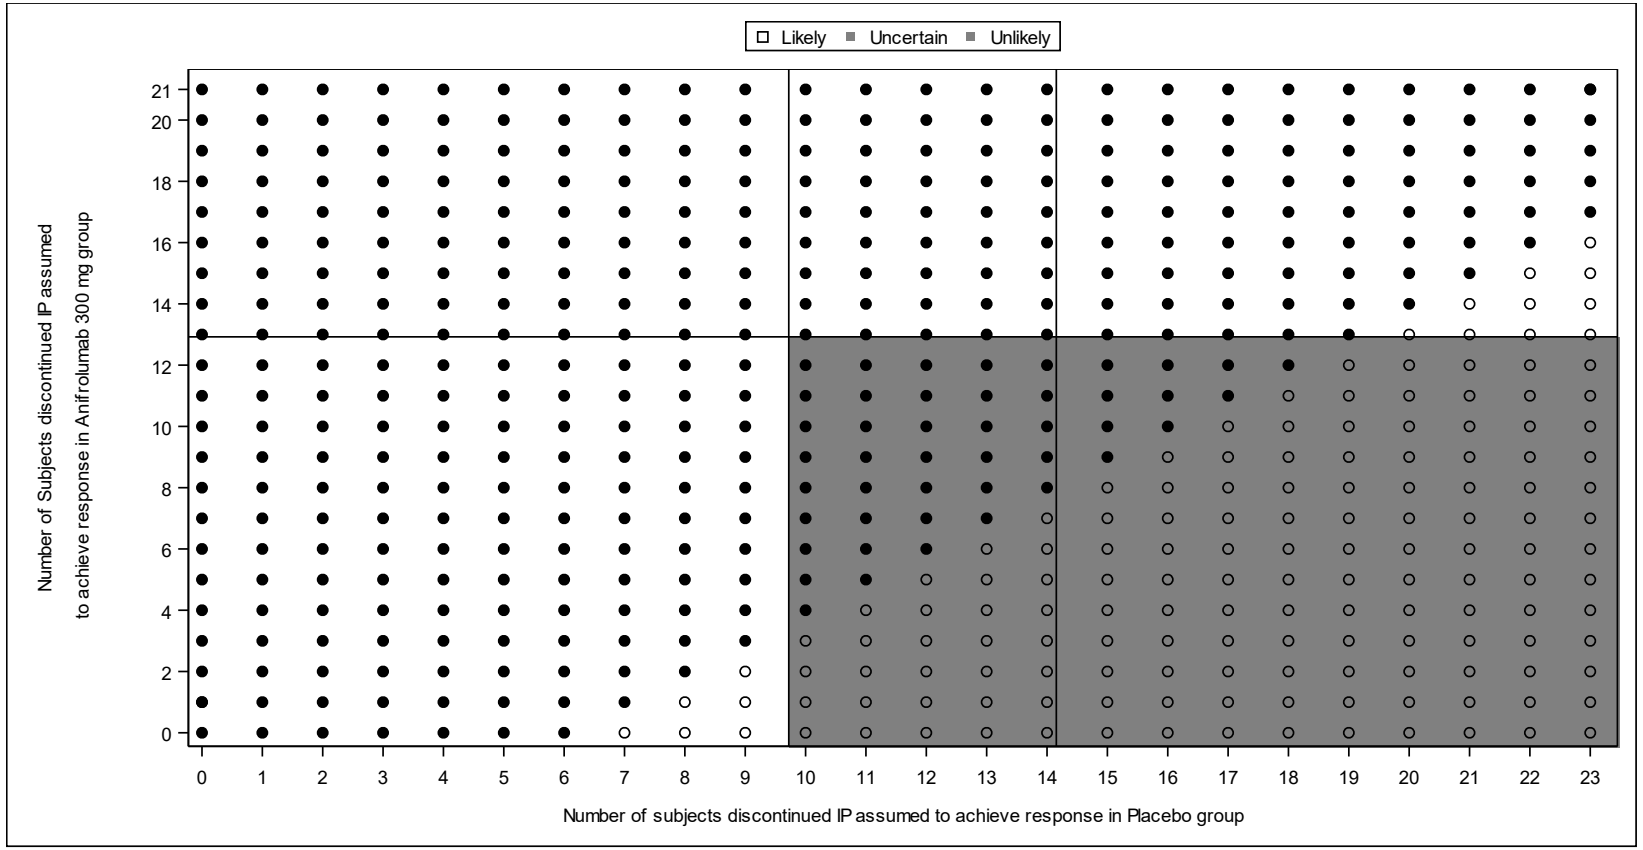
Plot of BICLA response rate sensitivity analysis at week 52, tipping point analysis
Full analysis set



Subjects with permanent discontinuation of IP are taken as non-responders at the bottom left grid. A certain number of such subjects from both groups are altered to be responders, while the numbers for both groups are as stated in both axes.
For each scenario, Pearson`s chi-squared test is used to compare the proportion of subjects achieving response at Week 52. The dots are presenting the results: filled = p-value <0.05, open = p-value >=0.05.
The three colors area indicate the tipping point area: white=likely, bright grey=uncertain, darker grey=Unlikely.

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with Adverse Event leading to death

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

>= 30	1/ 53 (1.9)	2.0	1/ 38 (2.6)	2.5	0.72 (0.05, 11.11)	0.8119	-0.47 (-14.19, 13.26)	0.9467	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Herpes Zoster leading to discontinuation of study drug

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

< 30	1/ 74 (1.4)	1.6	0/ 87 (0.0)	0.0	3.52 (0.15, 85.13)	0.4388	1.58 (-6.15, 9.30)	0.6893	
>= 30	0/ 53 (0.0)	0.0	1/ 38 (2.6)	2.7	0.24 (0.01, 5.75)	0.3792	-2.67 (-16.00, 10.65)	0.6941	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Serious Influenza
Full analysis set

>= 30	0/ 53 (0.0)	0.0	1/ 38 (2.6)	2.7	0.24 (0.01, 5.75)	0.3792	-2.67 (-16.00, 10.65)	0.6941	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Tuberculosis (including latent TB)

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Non-Severe Tuberculosis (including latent TB)

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Serious Malignancy

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of SOCs Cardiac disorders and/or Vascular disorders
Full analysis set

Kaplan-Meier median with 95% CI based on Brookmeyer-Crowley log(-log) transformation.
Hazard ratios, confidence intervals and 2-sided p-value are calculated from Cox proportional hazards model with factors for treatment and stratification factors.
Two-sided log rank test used.
p-Value for interaction from Cox proportional hazards model with factors for treatment, subgroup, treatment*subgroup interaction and stratfication factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Kaplan-Meier Plot of Time to first Onset of non-opportunistic serious infection (on-treatment)
Full analysis set

Kaplan-Meier Plots for subgroups are generated if p-value for interaction <0.05

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Summary of Incidence and Time to First Frequent Adverse Events by SOC, PT (incidence in either arm >= 10% or >=10 patients)
Full analysis set

SOC / PT		Anifrolumab 300mg (N=127)	Placebo (N=125)
SOC: Gastrointestinal disorders	Number of subjects with events, n (%)	29 (22.8)	29 (23.2)

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 28 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Summary of Incidence and Time to First Frequent Serious Adverse Events by SOC, PT (incidence in either arm >= 5% or >=10 patients) (on-treatment)
Full analysis set

	Risk Difference (95% CI)	14.33 (1.76, 26.91)	
	p-value	0.0255	

For each outcome and visit, 100 imputations were generated by randomised treatment group. Each imputed dataset was analysed separately, and the single estimates are combined using PROC MIANALYZE. The estimated number of responders and non-responders are rounded to an integer. Therefore, there might be slight mismatches between number of subjects and corresponding percentage.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)

	p-value	0.0016	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Maintained OCS Reduction at week 52 (for subjects with baseline OCS >=10 mg/day) - Subgroup analysis
Full analysis set

	Relative Risk (95% CI)	1.40 (0.99, 1.97)	
	p-value	0.0549	
	Odds Ratio (95% CI)	1.70 (0.99, 2.90)	
	p-value	0.0531	
	Risk Difference (95% CI)	12.20 (-0.03, 24.43)	
	p-value	0.0506	

For each outcome and visit, 100 imputations were generated by randomised treatment group. Each imputed dataset was analysed separately, and the single estimates are combined using PROC MIANALYZE. The estimated number of responders and non-responders are rounded to an integer. Therefore, there might be slight mismatches between number of subjects and corresponding percentage.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany

	p-value	0.5830	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Rates and rate ratio from negative binomial regression model with factors for treatment group and the stratification factors. The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.
p-Value for interaction from same negative binomial regression model with additional factors for subgroup and subgroup*treatment interaction.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Overall	44	110.33	0.35 (0.21)	64	101.21	0.55 (0.21)	0.63 (0.39, 1.01)	0.0555	

Rates and rate ratio from negative binomial regression model with factors for treatment group and the stratification factors. The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.
p-Value for interaction from same negative binomial regression model with additional factors for subgroup and subgroup*treatment interaction.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Flare rate through Week 52 sensitivity analysis, multiple imputation and negative binomial regression model

The number of flares after withdrawal from study is imputed conditional upon the observed number of flares prior to the withdrawal, a post-withdrawal model assumption, the baseline covariates included in the main analysis model and the time the subject would have remained in the study if not withdrawn (ie, date of first administration of IP + 364 days â€“ date of withdrawal). This analysis is repeated multiple times and the results combined using Rubinâ€™s formula. Full details are given in SAP
Rates and rate ratio from negative binomial regression model with factors for treatment group and the stratification factors. The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.

1.5	0.0929	0.1056	0.1165	0.1257	0.1333	0.1395	0.1445

The response variable in the model is the number of flares up to Week 52/EDV. The model includes covariates of treatment group, and the stratification factors (SLEDAI-2K Score at Screening (<10 points vs >= 10 points), Week 0 OCS dose (<10 mg/day vs >=10 mg/day prednisone or equivalent) and Type 1 IFN test result at screening (high vs low)).
The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.
P-values of this analysis are presented.
For the scenario in the upper left corner, missing at random analysis is performed, where for each subject the rate after withdrawal y1 is assumed to be the same as their rate before withdrawal y2, which itself is calculated based on their randomised treatment group and baseline covariates. For the other scenarios, the same analyses are performed with the rate after withdrawal modified to be Deltay2 (Delta P and Delta A for placebo and anifrolumab 300 mg, respectively).

Kaplan-Meier median with 95% CI based on Brookmeyer-Crowley log(-log) transformation.
Hazard ratios, confidence intervals and 2-sided p-value are calculated from Cox proportional hazards model with factors for treatment and stratification factors.
Two-sided log rank test used.
p-Value for interaction from Cox proportional hazards model with factors for treatment, subgroup, treatment*subgroup interaction and stratfication factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
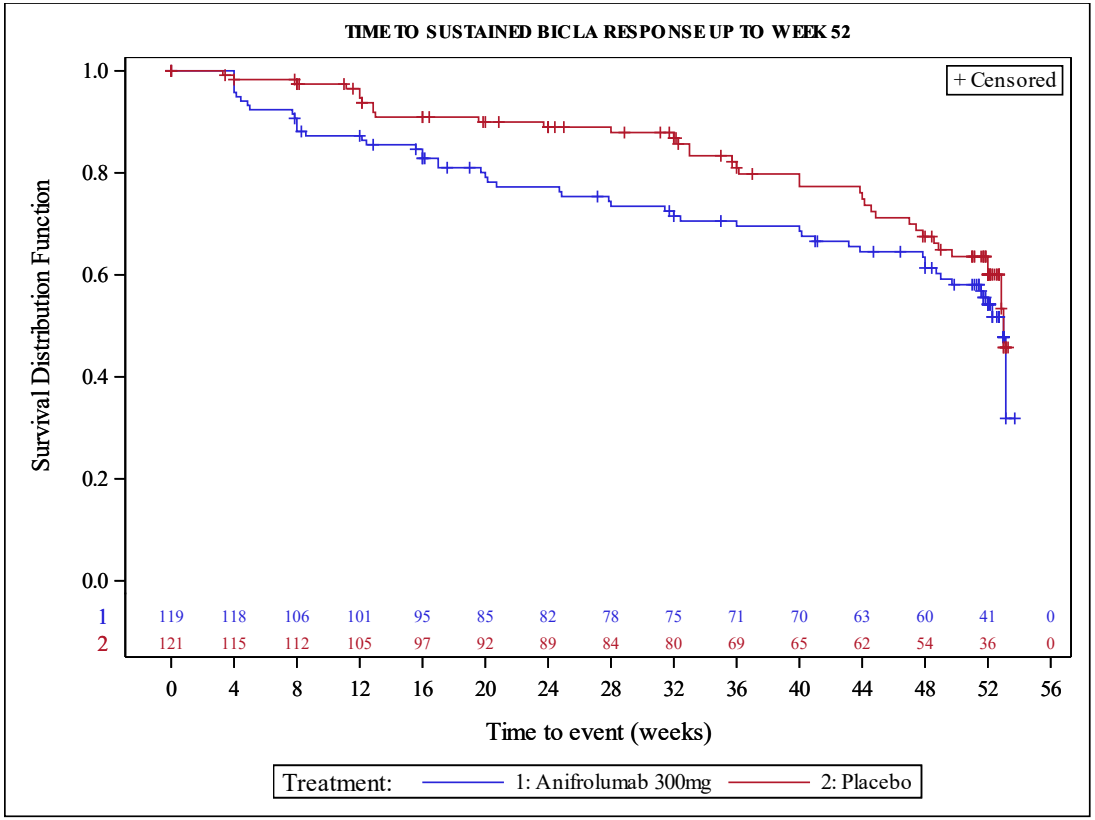
Kaplan-Meier Plot of Time to sustained BICLA response up to week 52
Full analysis set



Kaplan-Meier Plots for subgroups are generated if p-value for interaction <0.05

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Time to OCS Reduction <=7.5 mg/day (for subjects with baseline OCS >=10 mg/day)
Full analysis set

Kaplan-Meier Plots for subgroups are generated if p-value for interaction <0.05

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
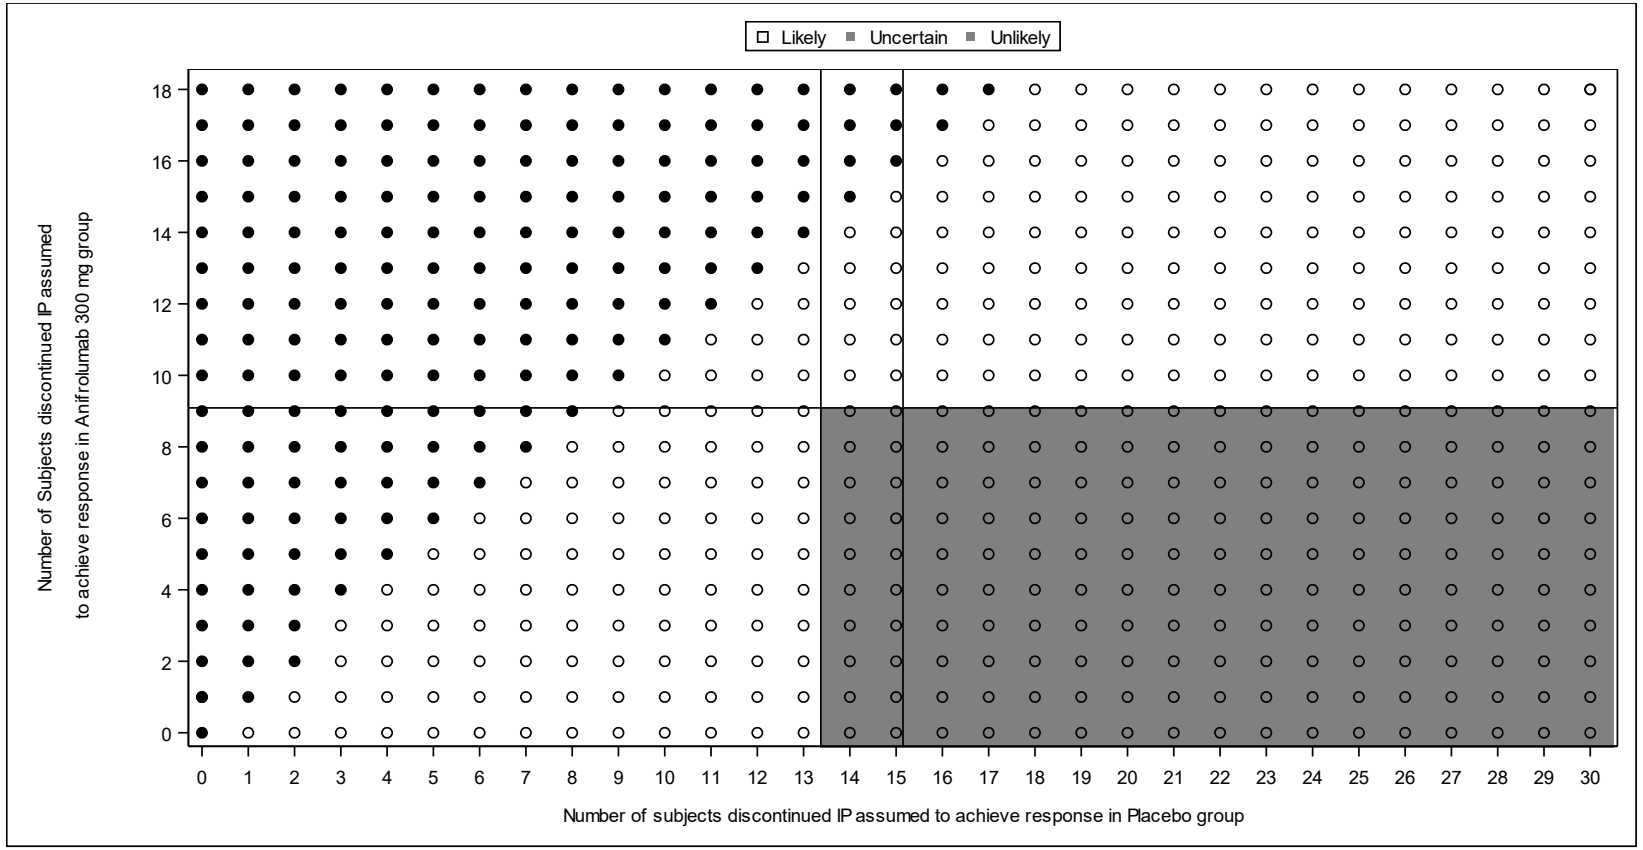
Plot of BICLA response rate sensitivity analysis at week 52, tipping point analysis
Full analysis set



Subjects with permanent discontinuation of IP are taken as non-responders at the bottom left grid. A certain number of such subjects from both groups are altered to be responders, while the numbers for both groups are as stated in both axes.
For each scenario, Pearson`s chi-squared test is used to compare the proportion of subjects achieving response at Week 52. The dots are presenting the results: filled = p-value <0.05, open = p-value >=0.05.
The three colors area indicate the tipping point area: white=likely, bright grey=uncertain, darker grey=Unlikely.

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Plot of SRI (4) response rate sensitivity analysis at week 52, tipping point analysis
Full analysis set

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Serious Adverse Event
Full analysis set

Baseline anti-dsDNA positive/or abnormal C3 and/or abnormal C4 versus complementary group									0.9475
All negative/normal	1/ 38 (2.6)	3.0	4/ 56 (7.1)	7.9	0.37 (0.04, 3.17)	0.3632	-4.98 (-19.89, 9.94)	0.5132	
At least one positive/abnormal	3/ 81 (3.7)	3.7	6/ 65 (9.2)	9.2	0.40 (0.10, 1.54)	0.1839	-5.53 (-14.85, 3.79)	0.2450	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Non-Severe Adverse Event
Full analysis set

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Non-Severe Herpes Zoster - Subgroup analysis

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Non-Severe Influenza
Full analysis set

At least one positive/abnormal	1/ 81 (1.2)	1.2	0/ 65 (0.0)	0.0	2.41 (0.10, 58.31)	0.5874	1.23 (-4.49, 6.96)	0.6726	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Non-Severe Non-opportunistic infection

Difference in response rates (95% CI)	0.00 (-6.50, 6.50)	
p-value	1.0000	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Serious Opportunistic infection - Subgroup analysis

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Serious Malignancy - Subgroup analysis

D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of SOCs Cardiac disorders and/or Vascular disorders
Full analysis set

	Anifrolumab 300mg (N=119)	Placebo (N=121)
Number of subjects with events, n (%)	5 (4.2)	7 (5.8)
Analysis Anifrolumab 300mg vs. Placebo		
Relative Risk (95% CI)	0.73 (0.24, 2.22)	
p-value	0.5755	
Odds Ratio (95% CI)	0.71 (0.22, 2.32)	
p-value	0.5752	
Risk Difference (95% CI)	-1.58 (-7.09, 3.92)	
p-value	0.5729	
CMH approach		
Response rate	4.3	5.7
Difference in response rates (95% CI)	-1.42 (-9.47, 6.63)	
p-value	0.7294	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Time to first Onset of Herpes Zoster (on-treatment)
Full analysis set

	Anifrolumab 300mg (N=119)	Placebo (N=121)
Number of subjects with events, n (%)	8 (6.7)	2 (1.7)
Number of censored subjects, n (%)	111 (93.3)	119 (98.3)
Kaplan-Meier Quartiles of Time to Event (weeks)		
25%-ile (95% CI)	NE (NE, NE)	NE (NE, NE)
Median (95% CI)	NE (NE, NE)	NE (NE, NE)
75%-ile (95% CI)	NE (NE, NE)	NE (NE, NE)
Analysis Anifrolumab 300mg vs. Placebo (adjusted)		
Hazard Ratio (95% CI)	4.25 (0.90, 20.04)	
p-value	0.1097	
Analysis Anifrolumab 300mg vs. Placebo (unadjusted)		
Hazard Ratio (95% CI)	3.86 (0.82, 18.17)	
p-value	0.0659	

Kaplan-Meier estimate with 95% CI based on Brookmeyer-Crowley log(-log) transformation.
Hazard ratios, confidence intervals and 2-sided p-value are calculated from Cox proportional hazards model. Adjusted analysis also includes stratification factors in the model.
Two-sided log rank test used.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

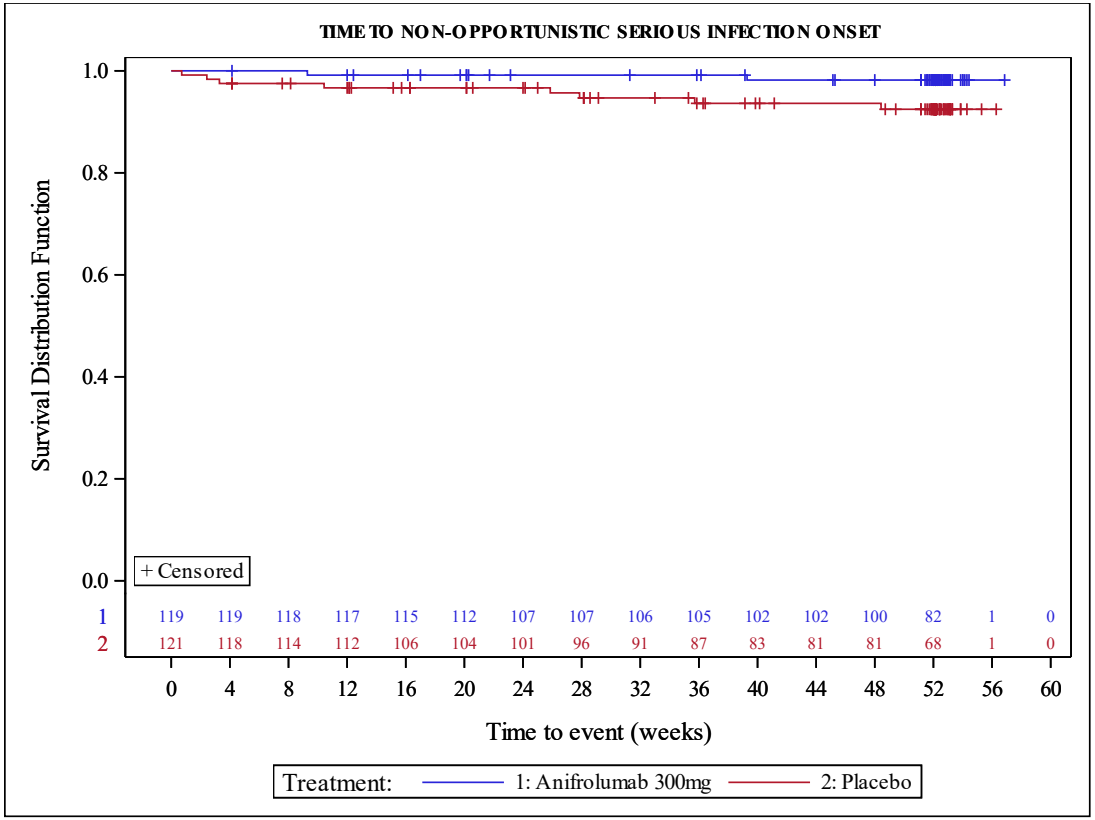
Baseline anti-dsDNA positive/or abnormal C3 and/or abnormal C4 versus complementary group							0.9931
All negative/normal	2/ 38 (5.3)	NE (NE, NE)	2/ 56 (3.6)	NE (NE, NE)	1.99 (0.26, 15.02)	0.5455	
At least one positive/abnormal	0/ 81 (0.0)	NE (NE, NE)	6/ 65 (9.2)	NE (NE, NE)	NE		

Kaplan-Meier median with 95% CI based on Brookmeyer-Crowley log(-log) transformation.
Hazard ratios, confidence intervals and 2-sided p-value are calculated from Cox proportional hazards model with factors for treatment and stratification factors.
Two-sided log rank test used.
p-Value for interaction from Cox proportional hazards model with factors for treatment, subgroup, treatment*subgroup interaction and stratfication factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Kaplan-Meier Plot of Time to first Onset of non-opportunistic serious infection (on-treatment)
Full analysis set



Kaplan-Meier Plots for subgroups are generated if p-value for interaction <0.05

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Summary of Incidence and Time to First Frequent Adverse Events by SOC, PT (incidence in either arm >= 10% or >=10 patients)
Full analysis set

SOC / PT		Anifrolumab 300mg (N=119)	Placebo (N=121)
SOC: Gastrointestinal disorders	Number of subjects with events, n (%)	21 (17.6)	33 (27.3)
	Analysis Anifrolumab 300mg vs. Placebo		
	Relative Risk (95% CI)	0.65 (0.40, 1.05)	
	p-value	0.0786	
	Odds Ratio (95% CI)	0.57 (0.31, 1.06)	
	p-value	0.0760	
	Risk Difference (95% CI)	-9.63 (-20.11, 0.86)	
	p-value	0.0719	
	CMH approach		
	Response rate	17.6	27.4
	Difference in response rates (95% CI)	-9.75 (-20.76, 1.26)	
	p-value	0.0827	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
