D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Serious Adverse Event (on-treatment)
Full analysis set

	Anifrolumab 300mg (N=119)	Placebo (N=121)
Number of subjects with events, n (%)	10 (8.4)	26 (21.5)
Analysis Anifrolumab 300mg vs. Placebo		
Relative Risk (95% CI)	0.39 (0.20, 0.78)	
p-value	0.0071	
Odds Ratio (95% CI)	0.34 (0.15, 0.73)	
p-value	0.0060	
Risk Difference (95% CI)	-13.08 (-21.94, -4.23)	
p-value	0.0038	
CMH approach		
Response rate	8.6	21.1
Difference in response rates (95% CI)	-12.43 (-22.37, -2.49)	
p-value	0.0143	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 28 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 28 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Summary of Incidence and Time to First Frequent Serious Adverse Events by SOC, PT (incidence in either arm >= 5% or >=10 patients) (on-treatment)
Full analysis set

For each outcome and visit, 100 imputations were generated by randomised treatment group. Each imputed dataset was analysed separately, and the single estimates are combined using PROC MIANALYZE. The estimated number of responders and non-responders are rounded to an integer. Therefore, there might be slight mismatches between number of subjects and corresponding percentage.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
p-Value for heterogenity between studies from test for heterogeneity of the relative risks in the studies using Cochrane>s Q statistic.

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)

For each outcome and visit, 100 imputations were generated by randomised treatment group. Each imputed dataset was analysed separately, and the single estimates are combined using PROC MIANALYZE. The estimated number of responders and non-responders are rounded to an integer. Therefore, there might be slight mismatches between number of subjects and corresponding percentage.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
p-Value for heterogenity between studies from test for heterogeneity of the relative risks in the studies using Cochrane>s Q statistic.

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Timepoint		Anifrolumab 300mg (N=246)	Placebo (N=246)
Week 52	Number of subjects with events, n (%)	55 (22.4)	33 (13.4)
	Analysis Anifrolumab 300mg vs. Placebo (stratified)		
	Relative Risk (95% CI)	1.62 (1.09, 2.39)	
	p-value	0.0164	
	Odds Ratio (95% CI)	1.82 (1.12, 2.95)	
	p-value	0.0152	
	Risk Difference (95% CI)	8.40 (1.71, 15.10)	
	p-value	0.0139	
	Analysis Anifrolumab 300mg vs. Placebo (unstratified)		
	Relative Risk (95% CI)	1.61 (1.08, 2.39)	
	p-value	0.0185	
	Odds Ratio (95% CI)	1.83 (1.13, 2.96)	
	p-value	0.0137	
	Risk Difference (95% CI)	8.89 (2.18, 15.61)	
	p-value	0.0095	
	CMH approach		
	Response rate	22.0	13.5
	Difference in response rates (95% CI)	8.49 (1.27, 15.71)	
	p-value	0.0211	
	p-Value for test for heterogenity between studies	0.1115	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for heterogenity between studies from test for heterogeneity of the relative risks in the studies using Cochrane>s Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Unstratified analysis also includes factor for study.

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
>=50% Joint reduction at week 52 (for subjects with at least 8 tender joints and swollen joints at baseline)
Full analysis set

	p-Value for test for heterogenity between studies	0.2504	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for heterogenity between studies from test for heterogeneity of the relative risks in the studies using Cochrane>s Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Unstratified analysis also includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
SF-36 v2.0 Acute response rate at week 52 - General Health Score - Subgroup analysis

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis - Total Organ Score Mucocutaneous
Full analysis set

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis - Total Organ Score Renal

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis - CLASI Total Activity Score

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis - BILAG Global Score

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis - Swollen Joint Count

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for heterogenity between studies from test for heterogeneity of the mean differences in the studies using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis - SF-36 v2.0 Acute Mental Health Score - Subgroup analysis

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis - SF-36 v2.0 Acute Role Physical Score

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis - SF-36 v2.0 Acute Bodily Pain Score

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis - FACIT-F Total Score

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis - Lupus QoL Burden to Others domain score

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis - Lupus QoL Intimate Relationships domain score

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for heterogenity between studies from test for heterogeneity of the mean differences in the studies using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis - PHQ-8 Total Score
Full analysis set

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

The number of flares after withdrawal from study is imputed conditional upon the observed number of flares prior to the withdrawal, a post-withdrawal model assumption, the baseline covariates included in the main analysis model and the time the subject would have remained in the study if not withdrawn (ie, date of first administration of IP + 364 days â€“ date of withdrawal). This analysis is repeated multiple times and the results combined using Rubinâ€™s formula. Full details are given in SAP
Rates and rate ratio from negative binomial regression model with factors for treatment group and the stratification factors. The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.

The response variable in the model is the number of flares up to Week 52/EDV. The model includes covariates of treatment group, and the stratification factors (SLEDAI-2K Score at Screening (<10 points vs >= 10 points), Week 0 OCS dose (<10 mg/day vs >=10 mg/day prednisone or equivalent) and Type 1 IFN test result at screening (high vs low)).
The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.
P-values of this analysis are presented.
For the scenario in the upper left corner, missing at random analysis is performed, where for each subject the rate after withdrawal y1 is assumed to be the same as their rate before withdrawal y2, which itself is calculated based on their randomised treatment group and baseline covariates. For the other scenarios, the same analyses are performed with the rate after withdrawal modified to be Deltay2 (Delta P and Delta A for placebo and anifrolumab 300 mg, respectively).

Kaplan-Meier median with 95% CI based on Brookmeyer-Crowley log(-log) transformation.
Hazard ratios, confidence intervals and 2-sided p-value are calculated from Cox proportional hazards model with factors for treatment and stratification factors.
Two-sided log rank test used.
p-Value for interaction from Cox proportional hazards model with factors for treatment, subgroup, treatment*subgroup interaction and stratfication factors.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
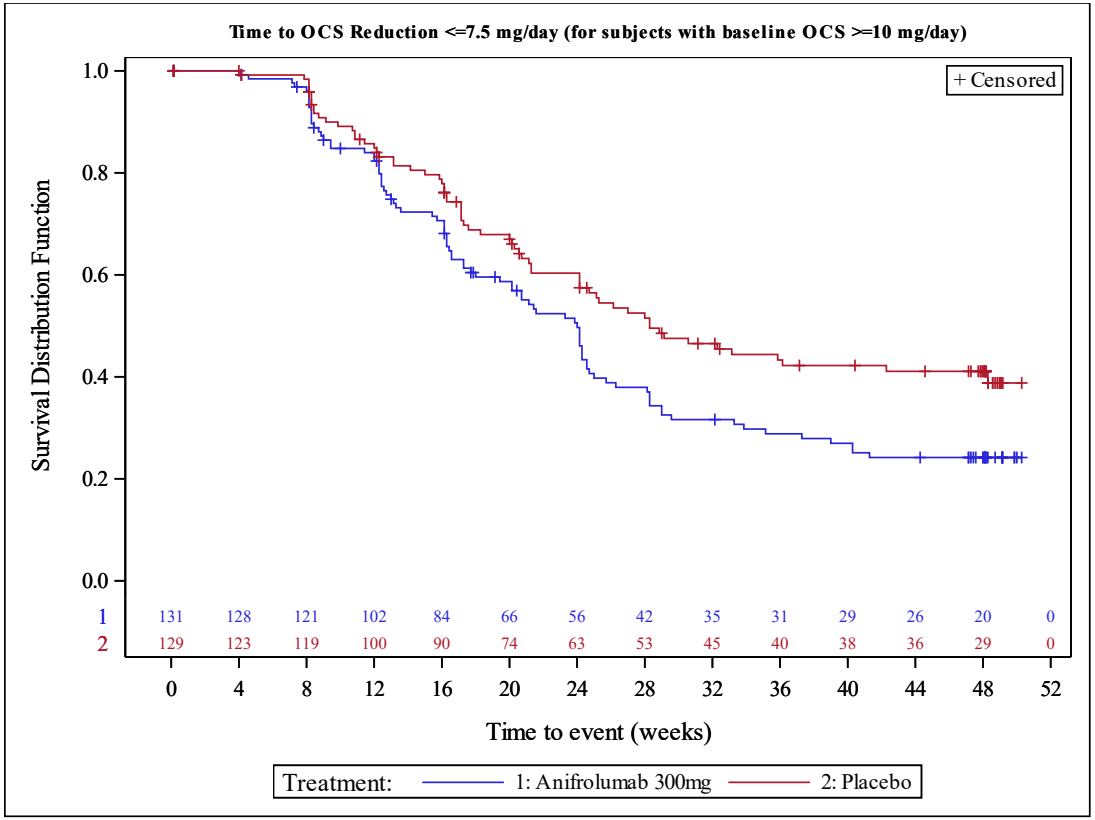
Kaplan-Meier Plot of Time to OCS Reduction <=7.5 mg/day (for subjects with baseline OCS >=10 mg/day)
Full analysis set



Kaplan-Meier Plots for subgroups are generated if p-value for interaction <0.05

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany

D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
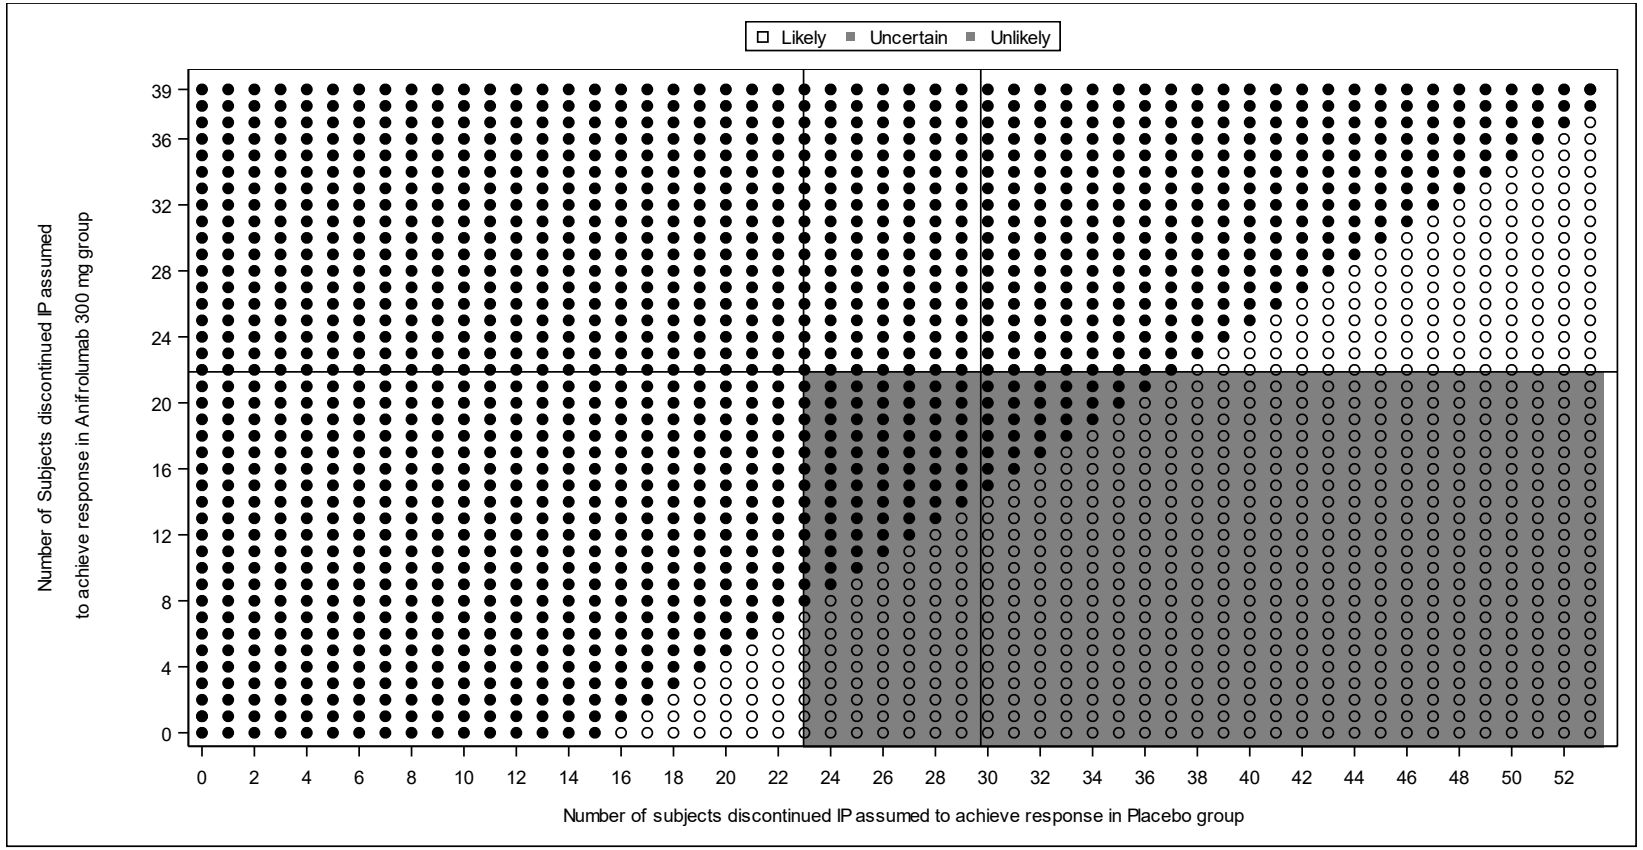
Plot of BICLA response rate sensitivity analysis at week 52, tipping point analysis
Full analysis set



Subjects with permanent discontinuation of IP are taken as non-responders at the bottom left grid. A certain number of such subjects from both groups are altered to be responders, while the numbers for both groups are as stated in both axes.
For each scenario, Pearson`s chi-squared test is used to compare the proportion of subjects achieving response at Week 52. The dots are presenting the results: filled = p-value <0.05, open = p-value >=0.05.
The three colors area indicate the tipping point area: white=likely, bright grey=uncertain, darker grey=Unlikely.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Plot of SRI (4) response rate sensitivity analysis at week 52, tipping point analysis
Full analysis set

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Severe Adverse Event
Full analysis set

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Anaphylaxis
Full analysis set

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Hypersensitivity

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Non-Severe Hypersensitivity

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - MACE
Full analysis set

	Anifrolumab 300mg (N=246)	Placebo (N=246)
Number of subjects with events, n (%)	1 (0.4)	0 (0.0)
Analysis Anifrolumab 300mg vs. Placebo		
Relative Risk (95% CI)	3.05 (0.13, 74.13)	
p-value	0.4933	
Odds Ratio (95% CI)	3.08 (0.12, 76.26)	
p-value	0.4928	
Risk Difference (95% CI)	0.41 (-0.39, 1.21)	
p-value	0.3143	
CMH approach		
Response rate	0.4	0.0
Difference in response rates (95% CI)	0.39 (-4.14, 4.92)	
p-value	0.8647	
p-Value for test for heterogenity between studies	NE	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for heterogenity between studies from test for heterogeneity of the relative risks in the studies using Cochranes Q statistic.
Stratification factors CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks, Odds Ratios and Risk Differences includes factor for study.

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Relative Risk (95% CI)	2.95 (0.12, 71.81)	
p-value	0.5060	
Odds Ratio (95% CI)	2.98 (0.12, 73.76)	
p-value	0.5055	
Risk Difference (95% CI)	0.40 (-0.39, 1.20)	
p-value	0.3183	
CMH approach		
Response rate	0.4	0.0
Difference in response rates (95% CI)	0.42 (-4.12, 4.96)	
p-value	0.8551	
p-Value for test for heterogenity between studies	NE	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for heterogenity between studies from test for heterogeneity of the relative risks in the studies using Cochranes Q statistic.
Stratification factors CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks, Odds Ratios and Risk Differences includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Non-Severe Opportunistic infection - Subgroup analysis

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Severe Tuberculosis (including latent TB)
Full analysis set

	Anifrolumab 300mg (N=246)	Placebo (N=246)
Number of subjects with events, n (%)	0 (0.0)	0 (0.0)
Analysis Anifrolumab 300mg vs. Placebo		
Relative Risk (95% CI)	NE	
p-value		
Odds Ratio (95% CI)	NE	
p-value		
Risk Difference (95% CI)	NE	
p-value		
CMH approach		
Response rate	0.0	0.0
Difference in response rates (95% CI)	0.00 (-4.48, 4.48)	
p-value	1.0000	
p-Value for test for heterogenity between studies	NE	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for heterogenity between studies from test for heterogeneity of the relative risks in the studies using Cochranes Q statistic.
Stratification factors CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks, Odds Ratios and Risk Differences includes factor for study.

Response rate	0.0	0.0
Difference in response rates (95% CI)	0.00 (-4.48, 4.48)	
p-value	1.0000	
p-Value for test for heterogenity between studies	NE	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for heterogenity between studies from test for heterogeneity of the relative risks in the studies using Cochranes Q statistic.
Stratification factors CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks, Odds Ratios and Risk Differences includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Serious Vasculitis - Subgroup analysis

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Serious Malignancy

Number of censored subjects, n (%)	240 (97.6)	233 (94.7)
Kaplan-Meier Quartiles of Time to Event (weeks)		
25%-ile (95% CI)	NE (NE, NE)	NE (NE, NE)
Median (95% CI)	NE (NE, NE)	NE (NE, NE)
75%-ile (95% CI)	NE (NE, NE)	NE (NE, NE)
Analysis Anifrolumab 300mg vs. Placebo (adjusted)		
Hazard Ratio (95% CI)	0.44 (0.17, 1.17)	
p-value	0.0573	
Analysis Anifrolumab 300mg vs. Placebo (unadjusted)		
Hazard Ratio (95% CI)	0.43 (0.16, 1.13)	
p-value	0.0803	
p-Value for test for heterogenity between studies	0.2460	

Kaplan-Meier estimate with 95% CI based on Brookmeyer-Crowley log(-log) transformation.
Hazard ratios, confidence intervals and 2-sided p-value are calculated from Cox proportional hazards model. Adjusted analysis also includes stratification factors in the model.
Two-sided log rank test used.
p-Value for heterogenity between studies from Cox proportional hazards model with factors for treatment, study, treatment*study interaction and stratfication factors.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Unadjusted analysis also includes factor for study.

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Summary of Incidence and Time to First Frequent Adverse Events by SOC, PT (incidence in either arm >= 10% or >=10 patients) - Subgroup analysis
Full analysis set

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Summary of Incidence and Time to First Frequent Serious Adverse Events by SOC, PT (incidence in either arm >= 5% or >=10 patients)
Full analysis set

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00001 (MUSE) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis (observed values) - BILAG Global Score - Subgroup analysis
Full analysis set (referred to as a 'modified Intent-to-treat' population in study CSR)

>=1	28	NE	26	NE	NE	NE		NE	NE		

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Yes	53	8.03 (2.64)	63	5.46 (2.55)	2.57 (3.35)	(-4.06, 9.20)	0.4445	0.13 (0.19)	(-0.24, 0.49)	0.4898	

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

>=1	27	11.43 (4.69)	21	3.22 (4.64)	8.21 (6.35)	(-4.58, 21.00)	0.2025	0.35 (0.29)	(-0.22, 0.93)	0.2325	

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

OVERALL	69	-11.99 (2.37)	75	-9.83 (2.29)	-2.16 (3.04)	(-8.17, 3.85)	0.4783	-0.11 (0.17)	(-0.44, 0.22)	0.5151

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)

Kaplan-Meier median with 95% CI based on Brookmeyer-Crowley log(-log) transformation.
Hazard ratios, confidence intervals and 2-sided p-value are calculated from Cox proportional hazards model with factors for treatment and stratification factors.
Two-sided log rank test used.
p-Value for interaction from Cox proportional hazards model with factors for treatment, subgroup, treatment*subgroup interaction and stratfication factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00001 (MUSE) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany

Proportion of patients with at least one frequent Severe (Grade >=3) by SOC, PT (incidence in either arm >= 5% or >=10 patients)
Safety analysis set

SOC / PT		Anifrolumab 300mg (N=69)	Placebo (N=75)
SOC: Infections and infestations	Number of subjects with events, n (%)	9 (13.0)	3 (4.0)
	Analysis Anifrolumab 300mg vs. Placebo		
	Relative Risk (95% CI)	3.26 (0.92, 11.55)	
	p-value	0.0671	
	Odds Ratio (95% CI)	3.60 (0.93, 13.90)	
	p-value	0.0631	
	Risk Difference (95% CI)	9.04 (-0.06, 18.14)	
	p-value	0.0514	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 28 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)

Anifrolumab (MEDI-546)
D3461C00001 (MUSE) - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Proportion of patients with at least one frequent Severe (Grade >=3) by SOC, PT (incidence in either arm >= 5% or >=10 patients) - Subgroup analysis
Safety analysis set

- NO OBSERVATIONS FOR THIS ANALYSIS -

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 28 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.

	Min, Max	2.5, 94.0	2.5, 98.0	2.5, 98.0
Complement CH50 level at baseline, categorisation (%)	Abnormal	32 (10.2)	31 (9.7)	63 (9.9)
	Normal	283 (89.8)	290 (90.3)	573 (90.1)

Baseline is defined as the last measurement prior to randomisation and dose administration on Day 1.
Only subjects with baseline positive anti-dsDNA and abnormal complement level, respectively, are included in the summary statistics for the respective variables.

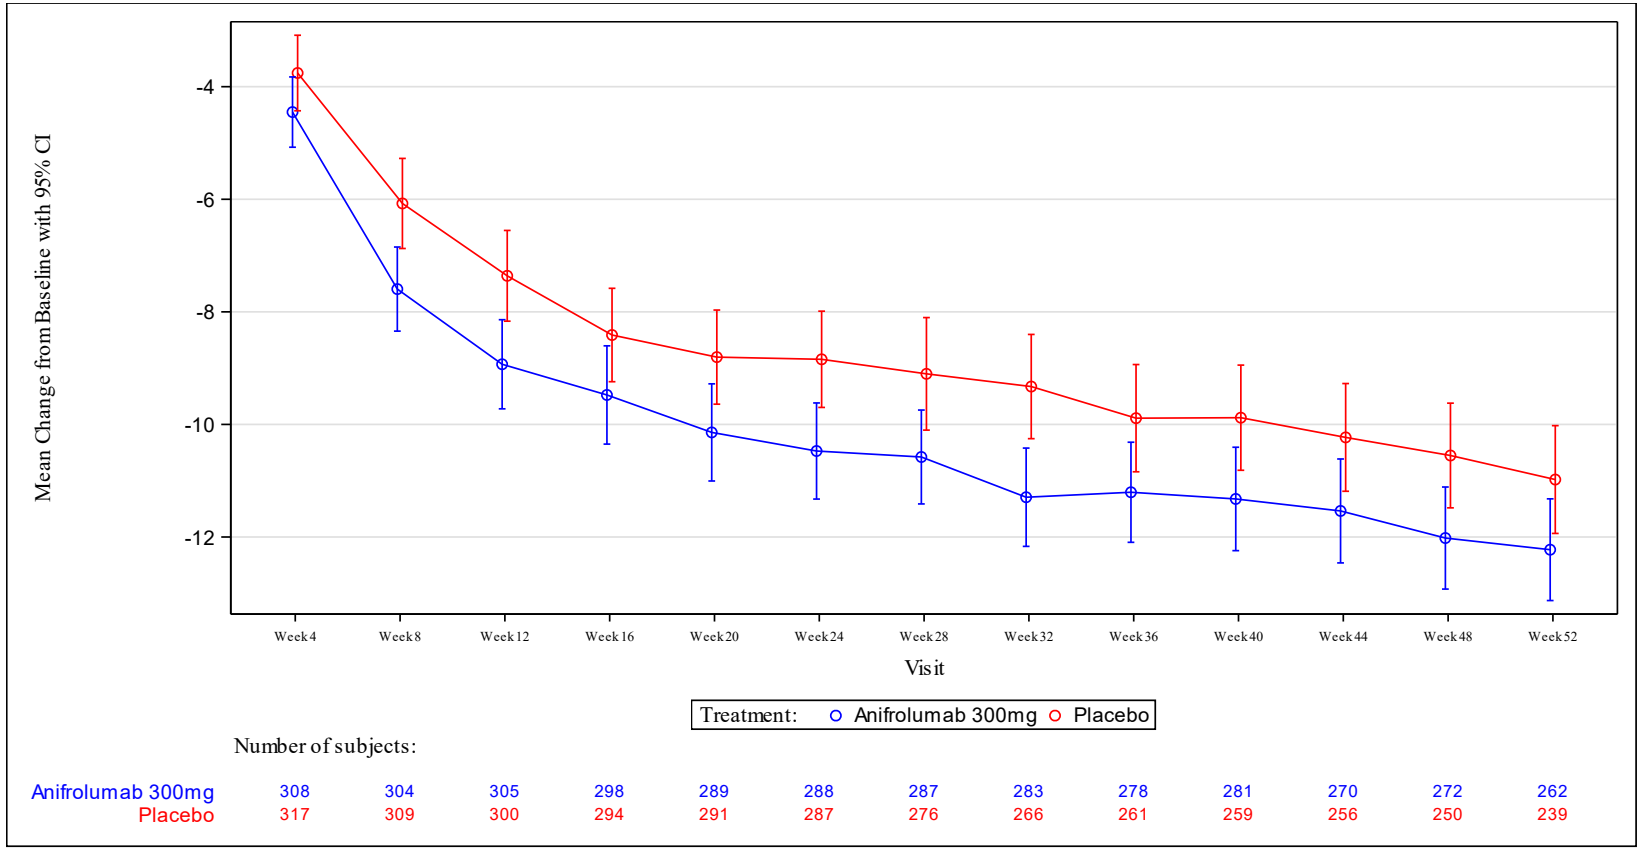
Week 52	262	6.52 (6.80)	262	-12.23 (7.43)	239	7.72 (6.53)	239	-10.98 (7.51)

N defines number of subjects with non-missing value at the respective visit.

Anifrolumab (MEDI-546)
TULIP SLE Study 1 + TULIP SLE Study 2 + MUSE Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Graphical Summary of change from baseline by timepoint (observed values) - BILAG Global Score
Full analysis set



N defines number of subjects with non-missing value at the respective visit.

Anifrolumab (MEDI-546)
TULIP SLE Study 1 + TULIP SLE Study 2 + MUSE Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Summary statistics of mean values and change from baseline by timepoint (observed values) - Tender Joint Count
Full analysis set
