A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Rates and rate ratio from negative binomial regression model with factors for treatment group and the stratification factors. The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.
p-Value for interaction from same negative binomial regression model with additional factors for subgroup and subgroup*treatment interaction.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)

Flare rate through Week 52 sensitivity analysis, multiple imputation and negative binomial regression model
Full analysis set

Subgroup Level	Anifrolumab 300mg (N=180) Number of flares	Anifrolumab 300mg (N=180) Total Follow-up time (years)	Anifrolumab 300mg (N=180) Annual rate (SE)	Placebo (N=182) Number of flares	Placebo (N=182) Total Follow-up time (years)	Placebo (N=182) Annual rate (SE)	Rate ratio (95% CI)	p-Value
Overall	92	180.49	0.43 (0.00)	141	182.26	0.64 (0.01)	0.66 (0.47, 0.93)	0.0181

The number of flares after withdrawal from study is imputed conditional upon the observed number of flares prior to the withdrawal, a post-withdrawal model assumption, the baseline covariates included in the main analysis model and the time the subject would have remained in the study if not withdrawn (ie, date of first administration of IP + 364 days â€“ date of withdrawal). This analysis is repeated multiple times and the results combined using Rubinâ€™s formula. Full details are given in SAP
Rates and rate ratio from negative binomial regression model with factors for treatment group and the stratification factors. The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
Flare rate through Week 52 sensitivity analysis, tipping point analysis
Full analysis set

Shift (log(Delta A)) for Anifrolumab 300 mg	Shift (log(Delta P)) for Placebo

1.5	0.0772	0.0903	0.1018	0.1116	0.1198	0.1265	0.1319

The response variable in the model is the number of flares up to Week 52/EDV. The model includes covariates of treatment group, and the stratification factors (SLEDAI-2K Score at Screening (<10 points vs >= 10 points), Week 0 OCS dose (<10 mg/day vs >=10 mg/day prednisone or equivalent) and Type 1 IFN test result at screening (high vs low)).
The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.
P-values of this analysis are presented.
For the scenario in the upper left corner, missing at random analysis is performed, where for each subject the rate after withdrawal y1 is assumed to be the same as their rate before withdrawal y2, which itself is calculated based on their randomised treatment group and baseline covariates. For the other scenarios, the same analyses are performed with the rate after withdrawal modified to be Deltay2 (Delta P and Delta A for placebo and anifrolumab 300 mg, respectively).

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
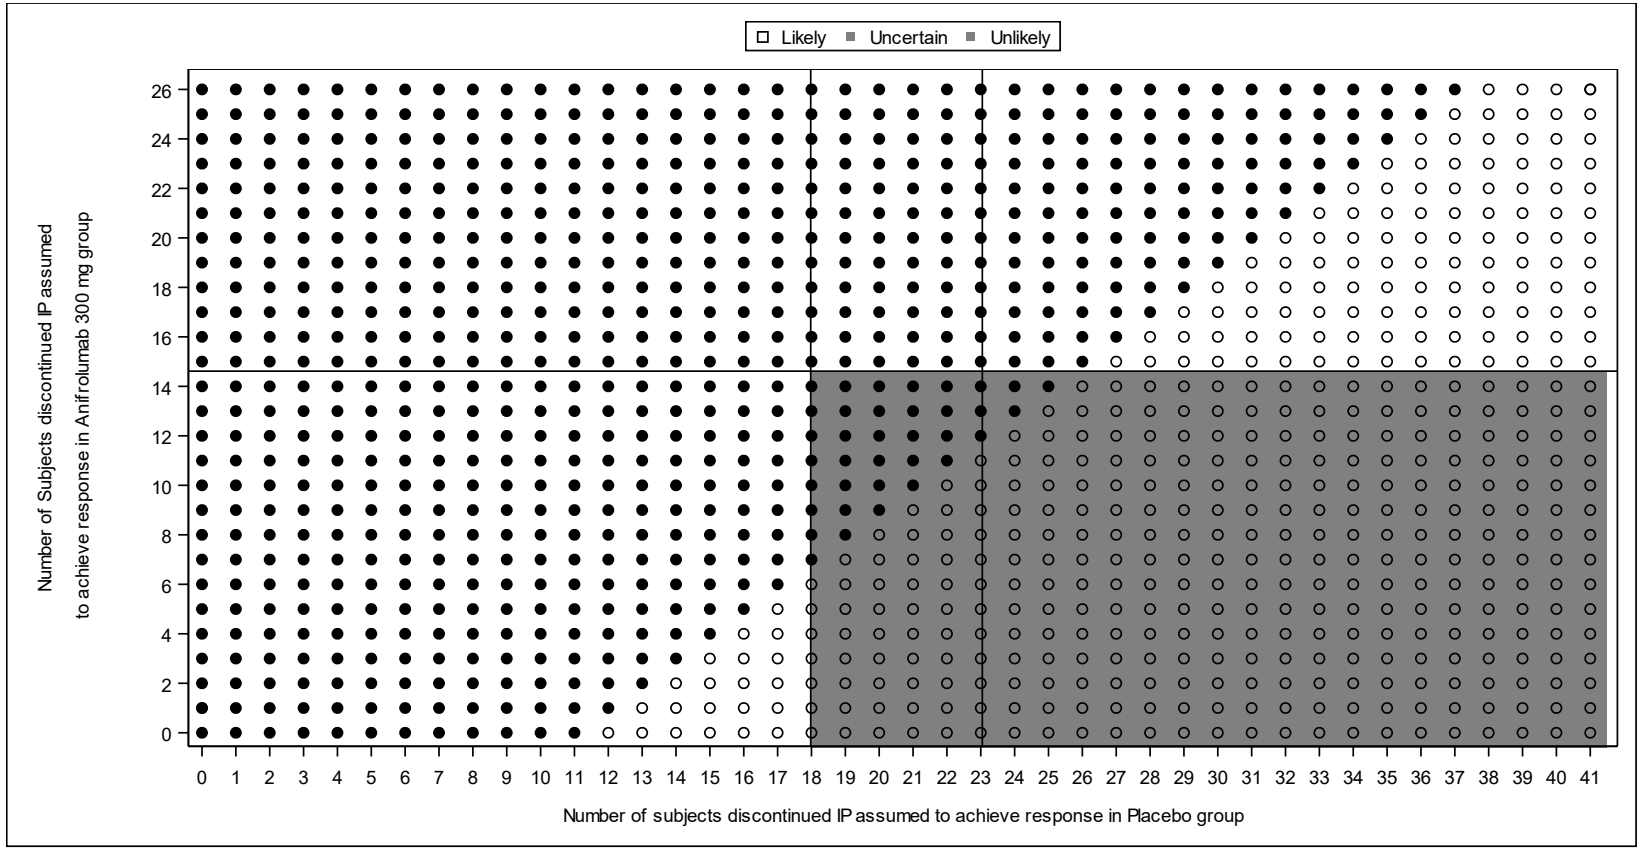
Plot of BICLA response rate sensitivity analysis at week 52, tipping point analysis
Full analysis set



Subjects with permanent discontinuation of IP are taken as non-responders at the bottom left grid. A certain number of such subjects from both groups are altered to be responders, while the numbers for both groups are as stated in both axes.
For each scenario, Pearson`s chi-squared test is used to compare the proportion of subjects achieving response at Week 52. The dots are presenting the results: filled = p-value <0.05, open = p-value >=0.05.
The three colors area indicate the tipping point area: white=likely, bright grey=uncertain, darker grey=Unlikely.

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
Plot of SRI (4) response rate sensitivity analysis at week 52, tipping point analysis
Full analysis set

Subjects with permanent discontinuation of IP are taken as non-responders at the bottom left grid. A certain number of such subjects from both groups are altered to be responders, while the numbers for both groups are as stated in both axes.
For each scenario, Pearson`s chi-squared test is used to compare the proportion of subjects achieving response at Week 52. The dots are presenting the results: filled = p-value <0.05, open = p-value >=0.05.
The three colors area indicate the tipping point area: white=likely, bright grey=uncertain, darker grey=Unlikely.

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
OCS dose increases and cumulative OCS dose until week 52
Full analysis set

		Anifrolumab 300mg (N=180)	Placebo (N=182)	Total (N=362)
Number of dose increases (%)	0	135 (75.0)	116 (63.7)	251 (69.3)
	1	28 (15.6)	35 (19.2)	63 (17.4)
	2	14 (7.8)	16 (8.8)	30 (8.3)

Cumulative OCS Dose (mg/day)	n (missing)	180 (0)	182 (0)	362 (0)
	Mean (SD)	2180.0 (1704.38)	2423.2 (1820.07)	2302.3 (1765.26)
	Median	2010.5	2281.3	2180.0
	Min, Max	0, 9075	0, 9188	0, 9188
AUC up to Week 52 (mg/day)	n (missing)	180 (0)	182 (0)	362 (0)
	Mean (SD)	2364.8 (2005.10)	2787.1 (2175.20)	2577.1 (2100.13)
	Median	2257.7	2467.4	2336.7
	Min, Max	0, 13265	0, 10920	0, 13265

Subjects without any documented dose value regarded as missing values for calculation of cumulative dose and AUC.
AUC defines the cumulative dose normalized for a period of 52 weeks.

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event
Full analysis set

	Anifrolumab 300mg (N=180)	Placebo (N=182)
Number of subjects with events, n (%)	162 (90.0)	154 (84.6)
Analysis Anifrolumab 300mg vs. Placebo		
Relative Risk (95% CI)	1.06 (0.98, 1.15)	
p-value	0.1249	
Odds Ratio (95% CI)	1.64 (0.87, 3.08)	
p-value	0.1266	
Risk Difference (95% CI)	5.38 (-1.45, 12.22)	
p-value	0.1224	
CMH approach		
Response rate	89.9	84.5
Difference in response rates (95% CI)	5.42 (-2.18, 13.03)	
p-value	0.1622	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Non-Severe Adverse Event
Full analysis set

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)

D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Hypersensitivity
Full analysis set

	Anifrolumab 300mg (N=180)	Placebo (N=182)
Number of subjects with events, n (%)	2 (1.1)	1 (0.5)
Analysis Anifrolumab 300mg vs. Placebo		
Relative Risk (95% CI)	2.02 (0.18, 22.10)	
p-value	0.5639	
Odds Ratio (95% CI)	2.03 (0.18, 22.63)	
p-value	0.5636	
Risk Difference (95% CI)	0.56 (-1.31, 2.43)	
p-value	0.5562	
CMH approach		
Response rate	1.1	0.5
Difference in response rates (95% CI)	0.56 (-4.15, 5.26)	
p-value	0.8173	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Severe Influenza
Full analysis set

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Severe Non-opportunistic infection

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Difference in response rates (95% CI)	0.00 (-4.43, 4.43)	
p-value	1.0000	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Severe Malignancy - Subgroup analysis

Baseline anti-dsDNA positive/or abnormal C3 and/or abnormal C4 versus complementary group									0.7471
All negative/normal	2/ 58 (3.4)	3.4	4/ 81 (4.9)	5.2	0.70 (0.13, 3.69)	0.6722	-1.77 (-12.49, 8.96)	0.7469	
At least one positive/abnormal	7/122 (5.7)	5.7	6/101 (5.9)	5.8	0.97 (0.34, 2.78)	0.9487	-0.07 (-7.97, 7.84)	0.9869	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
Time to first Onset of Herpes Zoster (on-treatment)
Full analysis set

	Anifrolumab 300mg (N=180)	Placebo (N=182)
Number of subjects with events, n (%)	13 (7.2)	2 (1.1)
Number of censored subjects, n (%)	167 (92.8)	180 (98.9)
Kaplan-Meier Quartiles of Time to Event (weeks)

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
Summary of Incidence and Time to First Frequent Adverse Events by SOC, PT (incidence in either arm >= 10% or >=10 patients) (on-treatment)
Full analysis set

SOC / PT		Anifrolumab 300mg (N=180)	Placebo (N=182)
SOC: Blood and lymphatic system disorders	Number of subjects with events, n (%)	7 (3.9)	10 (5.5)
	Analysis Anifrolumab 300mg vs. Placebo		
	Relative Risk (95% CI)	0.71 (0.28, 1.82)	
	p-value	0.4728	
	Odds Ratio (95% CI)	0.70 (0.26, 1.87)	
	p-value	0.4724	
	Risk Difference (95% CI)	-1.61 (-5.96, 2.75)	
	p-value	0.4696	
	CMH approach		
	Response rate	3.9	5.5
	Difference in response rates (95% CI)	-1.63 (-7.50, 4.25)	
	p-value	0.5879	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 28 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

	p-value	0.3891	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 28 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
Summary of Incidence and Time to First Frequent Adverse Events by SOC, PT (incidence in either arm >= 10% or >=10 patients) (on-treatment)
Full analysis set

Summary of Incidence and Time to First Frequent Adverse Events by SOC, PT (incidence in either arm >= 10% or >=10 patients) (on-treatment)
Full analysis set

SOC / PT		Anifrolumab 300mg (N=180)	Placebo (N=182)
SOC: Musculoskeletal and connective tissue disorders, PT: Back pain	Number of subjects with events, n (%)	10 (5.6)	3 (1.6)
	Analysis Anifrolumab 300mg vs. Placebo		
	Relative Risk (95% CI)	3.37 (0.94, 12.05)	
	p-value	0.0615	
	Odds Ratio (95% CI)	3.51 (0.95, 12.97)	
	p-value	0.0598	
	Risk Difference (95% CI)	3.91 (0.08, 7.73)	
	p-value	0.0452	
	CMH approach		
	Response rate	5.6	1.6
	Difference in response rates (95% CI)	3.96 (-1.60, 9.51)	
	p-value	0.1630	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 28 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
Summary of Incidence and Time to First Frequent Adverse Events by SOC, PT (incidence in either arm >= 10% or >=10 patients) (on-treatment)

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 28 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 28 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
Summary of Incidence and Time to First Frequent Serious Adverse Events by SOC, PT (incidence in either arm >= 5% or >=10 patients) (on-treatment)
Full analysis set

	p-Value for test for heterogenity between studies	0.1072	

For each outcome and visit, 100 imputations were generated by randomised treatment group. Each imputed dataset was analysed separately, and the single estimates are combined using PROC MIANALYZE. The estimated number of responders and non-responders are rounded to an integer. Therefore, there might be slight mismatches between number of subjects and corresponding percentage.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
p-Value for heterogenity between studies from test for heterogeneity of the relative risks in the studies using Cochrane>s Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Unstratified analysis also includes factor for study.

	p-value	<.0001	
	p-Value for test for heterogenity between studies	0.8862	

For each outcome and visit, 100 imputations were generated by randomised treatment group. Each imputed dataset was analysed separately, and the single estimates are combined using PROC MIANALYZE. The estimated number of responders and non-responders are rounded to an integer. Therefore, there might be slight mismatches between number of subjects and corresponding percentage.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
p-Value for heterogenity between studies from test for heterogeneity of the relative risks in the studies using Cochrane>s Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Partial clinical response at week 52
Full analysis set

	p-value	0.0122	
	p-Value for test for heterogenity between studies	0.7693	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for heterogenity between studies from test for heterogeneity of the relative risks in the studies using Cochrane>s Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Unstratified analysis also includes factor for study.

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Modified SELENA Flare Index based flares - mild/moderate or severe flare

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for heterogenity between studies from test for heterogeneity of the mean differences in the studies using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Repeated measures model analysis - Total Organ Score CVS and Respiratory

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Repeated measures model analysis - Total Organ Score Mucocutaneous

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Repeated measures model analysis - Total Organ Score Renal

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for heterogenity between studies from test for heterogeneity of the mean differences in the studies using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Repeated measures model analysis - Swollen Joint Count

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Repeated measures model analysis - SF-36 v2.0 Acute Physical Component Score

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for heterogenity between studies from test for heterogeneity of the mean differences in the studies using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Repeated measures model analysis - FACIT-F Total Score

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for heterogenity between studies from test for heterogeneity of the mean differences in the studies using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for heterogenity between studies from test for heterogeneity of the mean differences in the studies using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for heterogenity between studies from test for heterogeneity of the mean differences in the studies using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Repeated measures model analysis - PtGA - Subgroup analysis

The number of flares after withdrawal from study is imputed conditional upon the observed number of flares prior to the withdrawal, a post-withdrawal model assumption, the baseline covariates included in the main analysis model and the time the subject would have remained in the study if not withdrawn (ie, date of first administration of IP + 364 days â€“ date of withdrawal). This analysis is repeated multiple times and the results combined using Rubinâ€™s formula. Full details are given in SAP
Rates and rate ratio from negative binomial regression model with factors for treatment group and the stratification factors. The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

1.5	0.1412	0.1670	0.1895	0.2086	0.2244	0.2374	0.2478

The response variable in the model is the number of flares up to Week 52/EDV. The model includes covariates of treatment group, and the stratification factors (SLEDAI-2K Score at Screening (<10 points vs >= 10 points), Week 0 OCS dose (<10 mg/day vs >=10 mg/day prednisone or equivalent) and Type 1 IFN test result at screening (high vs low)).
The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.
P-values of this analysis are presented.
For the scenario in the upper left corner, missing at random analysis is performed, where for each subject the rate after withdrawal y1 is assumed to be the same as their rate before withdrawal y2, which itself is calculated based on their randomised treatment group and baseline covariates. For the other scenarios, the same analyses are performed with the rate after withdrawal modified to be Deltay2 (Delta P and Delta A for placebo and anifrolumab 300 mg, respectively).

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
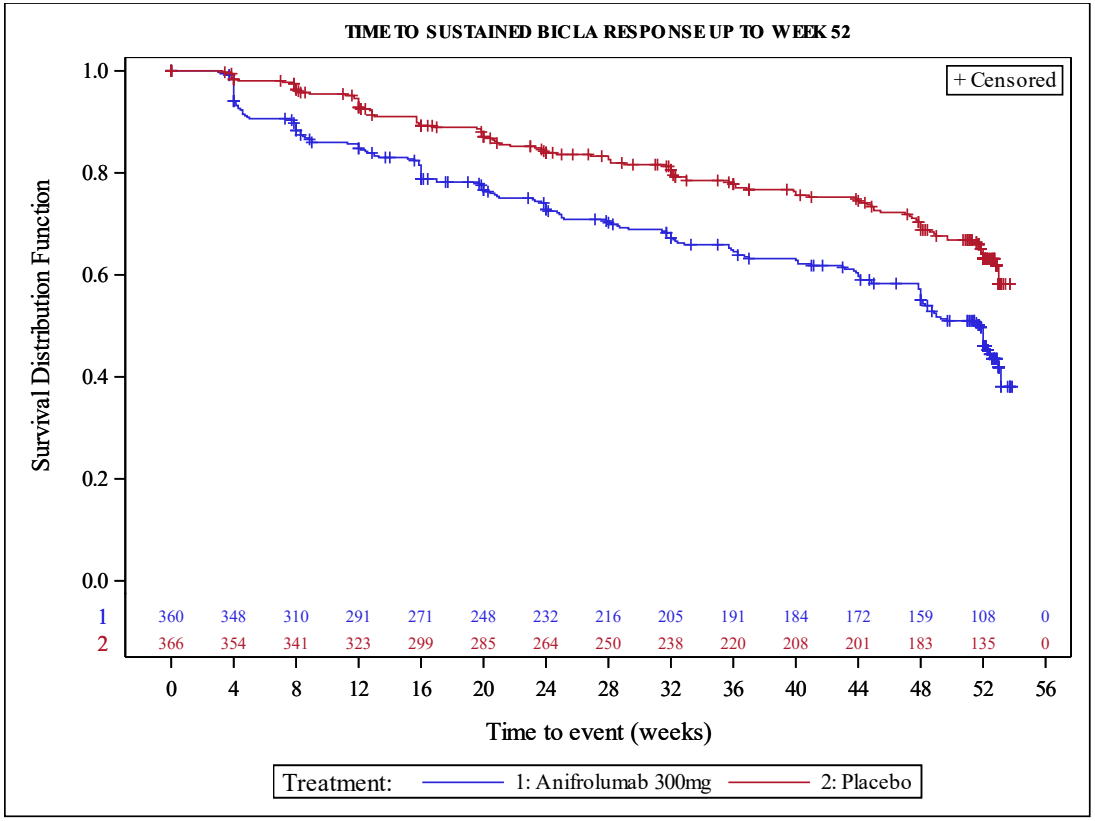
Kaplan-Meier Plot of Time to sustained BICLA response up to week 52
Full analysis set



Kaplan-Meier Plots for subgroups are generated if p-value for interaction <0.05

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Time to OCS Reduction <=7.5 mg/day (for subjects with baseline OCS >=10 mg/day)
Full analysis set

	Anifrolumab 300mg (N=190)	Placebo (N=185)
Number of subjects with events, n (%)	128 (67.4)	99 (53.5)
Number of censored subjects, n (%)	62 (32.6)	86 (46.5)
Kaplan-Meier Quartiles of Time to Event (weeks)		
25%-ile (95% CI)	12.71 (12.00, 16.14)	16.00 (12.00, 17.14)
Median (95% CI)	21.43 (18.71, 24.29)	28.29 (21.29, 36.14)
75%-ile (95% CI)	48.14 (32.14, NE)	NE (NE, NE)
Analysis Anifrolumab 300mg vs. Placebo (adjusted)		
Hazard Ratio (95% CI)	1.39 (1.07, 1.80)	
p-value	0.0108	
Analysis Anifrolumab 300mg vs. Placebo (unadjusted)		
Hazard Ratio (95% CI)	1.38 (1.06, 1.80)	
p-value	0.0160	
p-Value for test for heterogenity between studies	0.5341	

Kaplan-Meier estimate with 95% CI based on Brookmeyer-Crowley log(-log) transformation.
Hazard ratios, confidence intervals and 2-sided p-value are calculated from Cox proportional hazards model. Adjusted analysis also includes stratification factors in the model.
Two-sided log rank test used.
p-Value for heterogenity between studies from Cox proportional hazards model with factors for treatment, study, treatment*study interaction and stratfication factors.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Unadjusted analysis also includes factor for study.

Anifrolumab (MEDI-546)

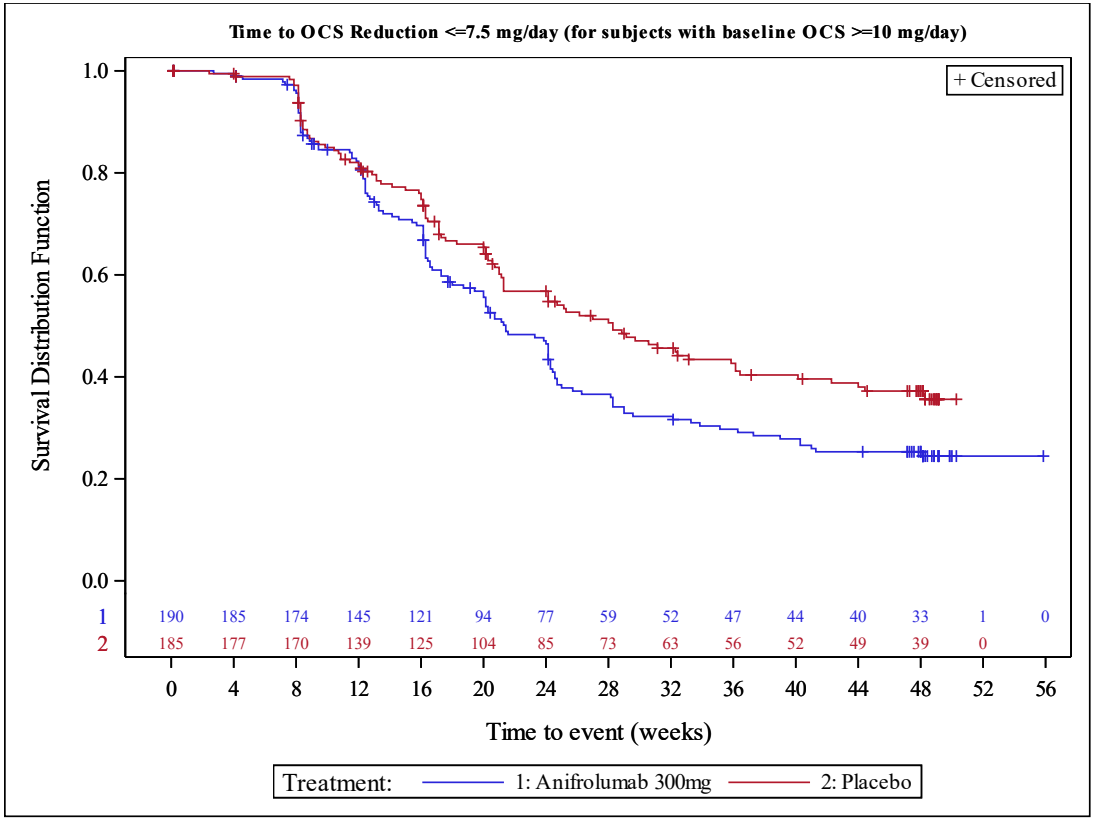
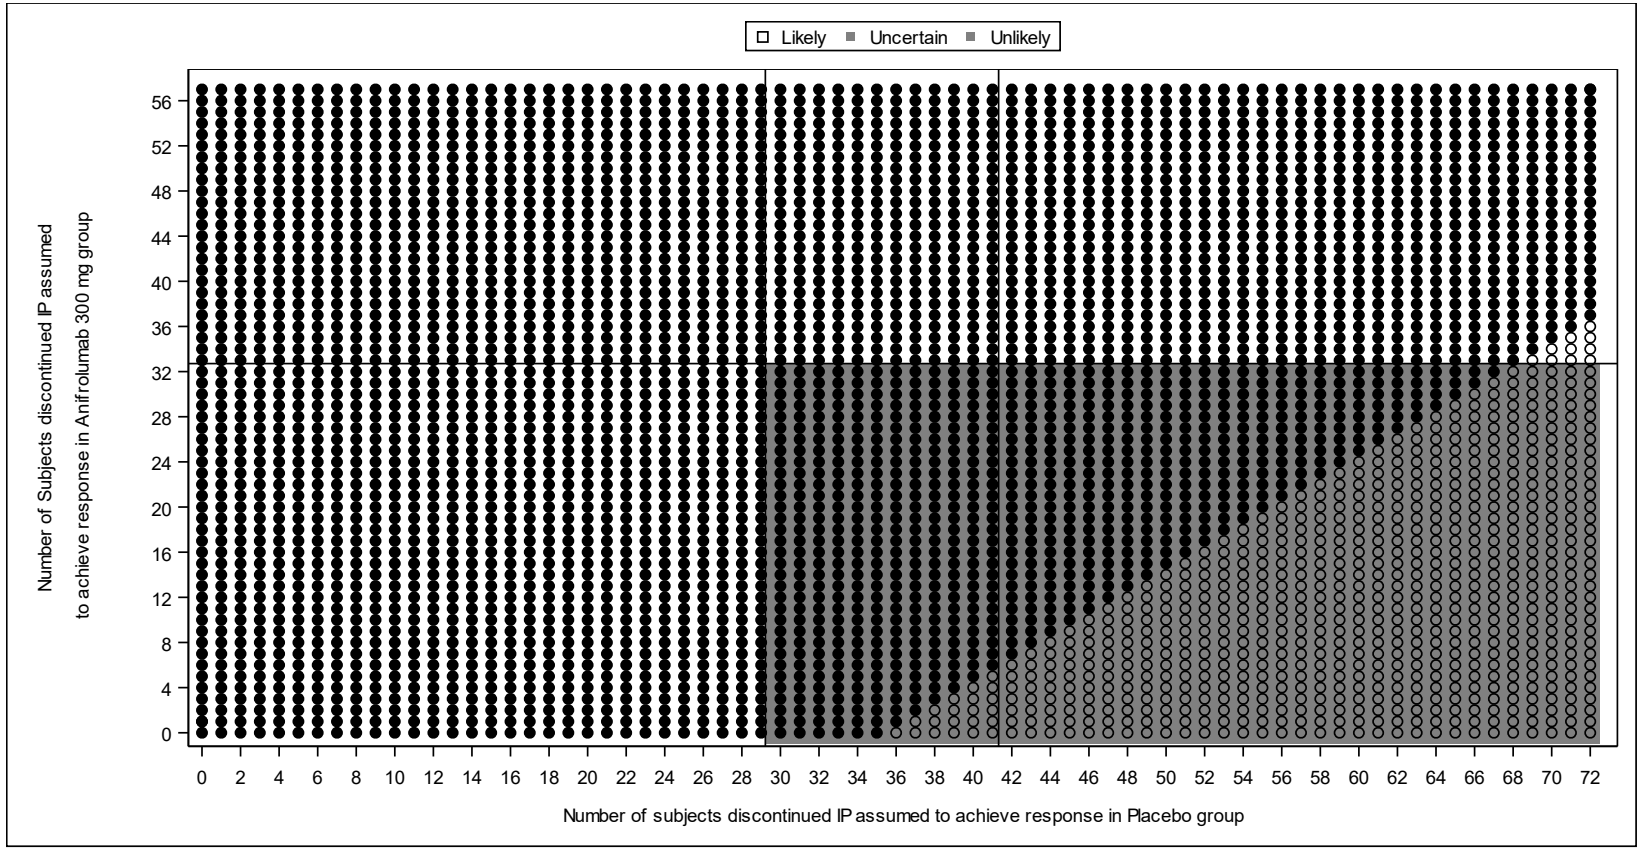
Kaplan-Meier median with 95% CI based on Brookmeyer-Crowley log(-log) transformation.
Hazard ratios, confidence intervals and 2-sided p-value are calculated from Cox proportional hazards model with factors for treatment and stratification factors.
Two-sided log rank test used.
p-Value for interaction from Cox proportional hazards model with factors for treatment, subgroup, treatment*subgroup interaction and stratfication factors.
Stratification factors: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Kaplan-Meier Plot of Time to OCS Reduction <=7.5 mg/day (for subjects with baseline OCS >=10 mg/day)
Full analysis set



Kaplan-Meier Plots for subgroups are generated if p-value for interaction <0.05

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Plot of BICLA response rate sensitivity analysis at week 52, tipping point analysis
Full analysis set



Subjects with permanent discontinuation of IP are taken as non-responders at the bottom left grid. A certain number of such subjects from both groups are altered to be responders, while the numbers for both groups are as stated in both axes.
For each scenario, Pearson`s chi-squared test is used to compare the proportion of subjects achieving response at Week 52. The dots are presenting the results: filled = p-value <0.05, open = p-value >=0.05.
The three colors area indicate the tipping point area: white=likely, bright grey=uncertain, darker grey=Unlikely.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Plot of SRI (4) response rate sensitivity analysis at week 52, tipping point analysis
Full analysis set

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Severe Adverse Event
Full analysis set

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Severe Herpes Zoster

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Severe Hypersensitivity

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Serious Influenza

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - MACE

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Opportunistic infection

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Non-Severe Opportunistic infection

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Summary of Incidence and Time to First Frequent Adverse Events by SOC, PT (incidence in either arm >= 10% or >=10 patients)
Full analysis set

SOC / PT		Anifrolumab 300mg (N=360)	Placebo (N=366)
SOC: Gastrointestinal disorders, PT: Abdominal pain upper	Number of subjects with events, n (%)	7 (1.9)	11 (3.0)
	Analysis Anifrolumab 300mg vs. Placebo		
	Relative Risk (95% CI)	0.65 (0.25, 1.68)	
	p-value	0.3768	
	Odds Ratio (95% CI)	0.65 (0.24, 1.71)	
	p-value	0.3779	
	Risk Difference (95% CI)	-1.06 (-3.31, 1.20)	
	p-value	0.3584	
	CMH approach		
	Response rate	1.9	3.1
	Difference in response rates (95% CI)	-1.15 (-4.85, 2.56)	
	p-value	0.5445	
	p-Value for test for heterogenity between studies	0.4993	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for heterogenity between studies from test for heterogeneity of the relative risks in the studies using Cochranes Q statistic.
Stratification factors CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks, Odds Ratios and Risk Differences includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Summary of Incidence and Time to First Frequent Adverse Events by SOC, PT (incidence in either arm >= 10% or >=10 patients)
Full analysis set

SOC / PT		Anifrolumab 300mg (N=360)	Placebo (N=366)
SOC: Gastrointestinal disorders, PT: Diarrhoea	Number of subjects with events, n (%)	14 (3.9)	22 (6.0)
	Analysis Anifrolumab 300mg vs. Placebo		
	Relative Risk (95% CI)	0.66 (0.34, 1.29)	
	p-value	0.2208	
	Odds Ratio (95% CI)	0.64 (0.32, 1.30)	
	p-value	0.2186	
	Risk Difference (95% CI)	-2.12 (-5.27, 1.03)	
	p-value	0.1875	
	CMH approach		
	Response rate	3.9	6.0
	Difference in response rates (95% CI)	-2.08 (-6.27, 2.10)	
	p-value	0.3294	
	p-Value for test for heterogenity between studies	0.2205	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Summary of Incidence and Time to First Frequent Adverse Events by SOC, PT (incidence in either arm >= 10% or >=10 patients) - Subgroup analysis

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: Study [Tulip1, Tulip2], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Analysis of Relative Risks includes factor for study.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) + D3461C00004 (TULIP SLE Study 2) Meta-Analysis - Anifrolumab 300mg vs. Placebo population
Summary of Incidence and Time to First Frequent Adverse Events by SOC, PT (incidence in either arm >= 10% or >=10 patients) - Subgroup analysis

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00001 (MUSE) - Anifrolumab 300mg vs. Placebo population
Repeated measures model analysis (observed values) - SLEDAI-2K Total Score - Subgroup analysis
Full analysis set (referred to as a 'modified Intent-to-treat' population in study CSR)

Subgroup	Anifrolumab 300mg (N=99)		Placebo (N=102)		Difference of						Interaction
Level	N	LSMean (SE)	N	LSMean (SE)	LSMeans (SE)	(95% CI)	p-Value	Hedges'g (SE)	(95% CI)	p-Value	p-Value
SLEDAI-2K score											0.6508
< 10 points	39	-3.42 (0.41)	40	-2.54 (0.41)	-0.88 (0.57)	(-2.02, 0.26)	0.1292	-0.34 (0.23)	(-0.78, 0.11)	0.1346	
>= 10 points	60	-5.52 (0.49)	62	-4.25 (0.51)	-1.28 (0.66)	(-2.59, 0.04)	0.0568	-0.32 (0.18)	(-0.68, 0.03)	0.0749
