A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for heterogenity between studies from test for heterogeneity of the mean differences in the studies using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for heterogenity between studies from test for heterogeneity of the mean differences in the studies using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for heterogenity between studies from test for heterogeneity of the mean differences in the studies using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
TULIP SLE Study 1 + TULIP SLE Study 2 + MUSE Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis (observed values) - Swollen Joint Count

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
TULIP SLE Study 1 + TULIP SLE Study 2 + MUSE Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis (observed values) - SF-36 v2.0 Acute Physical Component Score
Full analysis set

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
TULIP SLE Study 1 + TULIP SLE Study 2 + MUSE Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis (observed values) - SF-36 v2.0 Acute Mental Health Score
Full analysis set

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
TULIP SLE Study 1 + TULIP SLE Study 2 + MUSE Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis (observed values) - FACIT-F Total Score

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
TULIP SLE Study 1 + TULIP SLE Study 2 + MUSE Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis (observed values) - Lupus QoL Physical Health domain score
Full analysis set

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
TULIP SLE Study 1 + TULIP SLE Study 2 + MUSE Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis (observed values) - Lupus QoL Intimate Relationships domain score
Full analysis set

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
TULIP SLE Study 1 + TULIP SLE Study 2 + MUSE Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis (observed values) - Lupus QoL Planning domain score

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for heterogenity between studies from test for heterogeneity of the mean differences in the studies using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
TULIP SLE Study 1 + TULIP SLE Study 2 + MUSE Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Repeated measures model analysis (observed values) - PtGA - Subgroup analysis

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model, e.g. subjects with non-missing baseline and at least one non-missing post-baseline value.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges>g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Rates and rate ratio from negative binomial regression model with factors for treatment group and the stratification factors. The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.
Study*treatment interaction also included to assess heterogenity between studies.
p-Value for interaction from same negative binomial regression model with additional factors for subgroup and subgroup*treatment interaction.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
TULIP SLE Study 1 + TULIP SLE Study 2 + MUSE Meta-Analysis - Anifrolumab 300mg vs. Placebo population receiving standard of care treatment approved in Germany
Time to first Flare
Full analysis set

	Anifrolumab 300mg (N=315)	Placebo (N=321)
Number of subjects with events, n (%)	92 (29.2)	126 (39.3)
Number of censored subjects, n (%)	223 (70.8)	195 (60.7)
Kaplan-Meier Quartiles of Time to Event (weeks)		
25%-ile (95% CI)	36.14 (28.14, 49.00)	20.43 (19.71, 27.86)
Median (95% CI)	NE (NE, NE)	NE (NE, NE)
75%-ile (95% CI)	NE (NE, NE)	NE (NE, NE)
Analysis Anifrolumab 300mg vs. Placebo (adjusted)		
Hazard Ratio (95% CI)	0.66 (0.50, 0.86)	
p-value	0.0023	
Analysis Anifrolumab 300mg vs. Placebo (unadjusted)		
Hazard Ratio (95% CI)	0.66 (0.51, 0.87)	
p-value	0.0026	
p-Value for test for heterogenity between studies	0.7262	

Kaplan-Meier estimate with 95% CI based on Brookmeyer-Crowley log(-log) transformation.
Hazard ratios, confidence intervals and 2-sided p-value are calculated from Cox proportional hazards model. Adjusted analysis also includes stratification factors in the model.
Two-sided log rank test used.
p-Value for heterogenity between studies from Cox proportional hazards model with factors for treatment, study, treatment*study interaction and stratfication factors.
Stratification factors: Study [Tulip1, Tulip2, MUSE], SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
Unadjusted analysis also includes factor for study.

	Relative Risk (95% CI)	1.09 (0.57, 2.08)	
	p-value	0.8036	
	Odds Ratio (95% CI)	1.10 (0.54, 2.24)	
	p-value	0.8036	
	Risk Difference (95% CI)	0.75 (-5.15, 6.65)	
	p-value	0.8036	
	CMH approach		
	Response rate	9.6	8.7
	Difference in response rates (95% CI)	0.82 (-6.14, 7.78)	
	p-value	0.8168	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

	p-value	0.2352	
	Risk Difference (95% CI)	6.25 (-4.04, 16.54)	
	p-value	0.2341	

For each outcome and visit, 100 imputations were generated by randomised treatment group. Each imputed dataset was analysed separately, and the single estimates are combined using PROC MIANALYZE. The estimated number of responders and non-responders are rounded to an integer. Therefore, there might be slight mismatches between number of subjects and corresponding percentage.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population

	p-value	0.0013	
	Odds Ratio (95% CI)	2.06 (1.34, 3.18)	
	p-value	0.0011	
	Risk Difference (95% CI)	16.90 (6.99, 26.81)	
	p-value	0.0008	

For each outcome and visit, 100 imputations were generated by randomised treatment group. Each imputed dataset was analysed separately, and the single estimates are combined using PROC MIANALYZE. The estimated number of responders and non-responders are rounded to an integer. Therefore, there might be slight mismatches between number of subjects and corresponding percentage.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)

	CMH approach		
	Response rate	47.2	30.6
	Difference in response rates (95% CI)	16.54 (6.66, 26.43)	
	p-value	0.0010	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
BICLA response rate sensitivity analysis excluding criterion of no restricted medications at week 52
Full analysis set

Timepoint		Anifrolumab 300mg (N=180)	Placebo (N=184)
Week 52	Number of subjects with events, n (%)	98 (54.4)	72 (39.1)
	Analysis Anifrolumab 300mg vs. Placebo (stratified)		
	Relative Risk (95% CI)	1.38 (1.11, 1.73)	
	p-value	0.0046	
	Odds Ratio (95% CI)	1.81 (1.20, 2.73)	
	p-value	0.0045	
	Risk Difference (95% CI)	15.18 (4.86, 25.50)	
	p-value	0.0039	
	Analysis Anifrolumab 300mg vs. Placebo (unstratified)		
	Relative Risk (95% CI)	1.39 (1.11, 1.74)	
	p-value	0.0039	
	Odds Ratio (95% CI)	1.86 (1.23, 2.82)	
	p-value	0.0035	
	Risk Difference (95% CI)	15.31 (5.18, 25.45)	
	p-value	0.0031	
	CMH approach		
	Response rate	54.4	39.4
	Difference in response rates (95% CI)	14.98 (4.91, 25.05)	
	p-value	0.0036	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Rates and rate ratio from negative binomial regression model with factors for treatment group and the stratification factors. The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.
p-Value for interaction from same negative binomial regression model with additional factors for subgroup and subgroup*treatment interaction.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)

The number of flares after withdrawal from study is imputed conditional upon the observed number of flares prior to the withdrawal, a post-withdrawal model assumption, the baseline covariates included in the main analysis model and the time the subject would have remained in the study if not withdrawn (ie, date of first administration of IP + 364 days â€“ date of withdrawal). This analysis is repeated multiple times and the results combined using Rubinâ€™s formula. Full details are given in SAP
Rates and rate ratio from negative binomial regression model with factors for treatment group and the stratification factors. The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
Flare rate through Week 52 sensitivity analysis, tipping point analysis
Full analysis set

Shift (log(Delta A)) for Anifrolumab 300 mg	Shift (log(Delta P)) for Placebo						
	0	-0.25	-0.5	-0.75	-1	-1.25	-1.5

1.5	0.6639	0.7017	0.7316	0.7553	0.7738	0.7883	0.7997

The response variable in the model is the number of flares up to Week 52/EDV. The model includes covariates of treatment group, and the stratification factors (SLEDAI-2K Score at Screening (<10 points vs >= 10 points), Week 0 OCS dose (<10 mg/day vs >=10 mg/day prednisone or equivalent) and Type 1 IFN test result at screening (high vs low)).
The logarithm (to base e) of the follow-up time is used as an offset variable in the model to adjust for subjects having different exposure times.
P-values of this analysis are presented.
For the scenario in the upper left corner, missing at random analysis is performed, where for each subject the rate after withdrawal y1 is assumed to be the same as their rate before withdrawal y2, which itself is calculated based on their randomised treatment group and baseline covariates. For the other scenarios, the same analyses are performed with the rate after withdrawal modified to be Deltay2 (Delta P and Delta A for placebo and anifrolumab 300 mg, respectively).

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
Overall Survival
Full analysis set

Kaplan-Meier median with 95% CI based on Brookmeyer-Crowley log(-log) transformation.
Hazard ratios, confidence intervals and 2-sided p-value are calculated from Cox proportional hazards model with factors for treatment and stratification factors.
Two-sided log rank test used.
p-Value for interaction from Cox proportional hazards model with factors for treatment, subgroup, treatment*subgroup interaction and stratfication factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
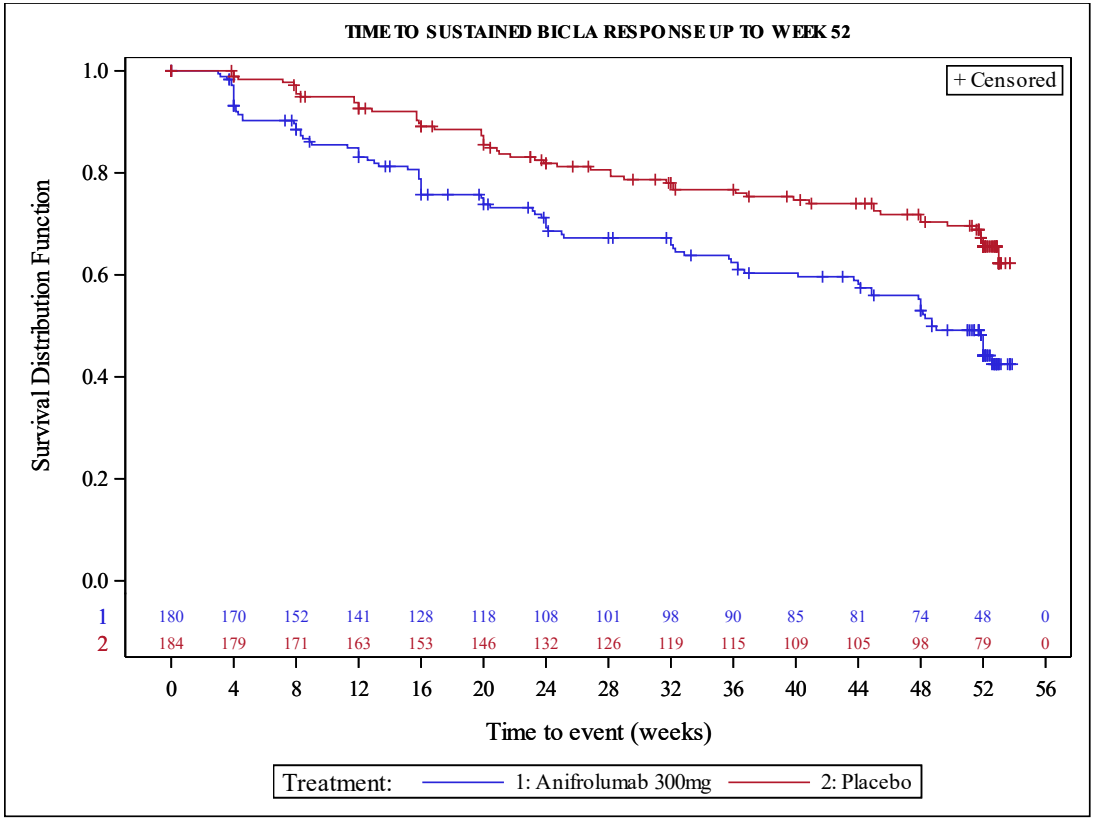
Kaplan-Meier Plot of Time to sustained BICLA response up to week 52
Full analysis set



Kaplan-Meier Plots for subgroups are generated if p-value for interaction <0.05

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
Time to OCS Reduction <=7.5 mg/day (for subjects with baseline OCS >=10 mg/day)
Full analysis set

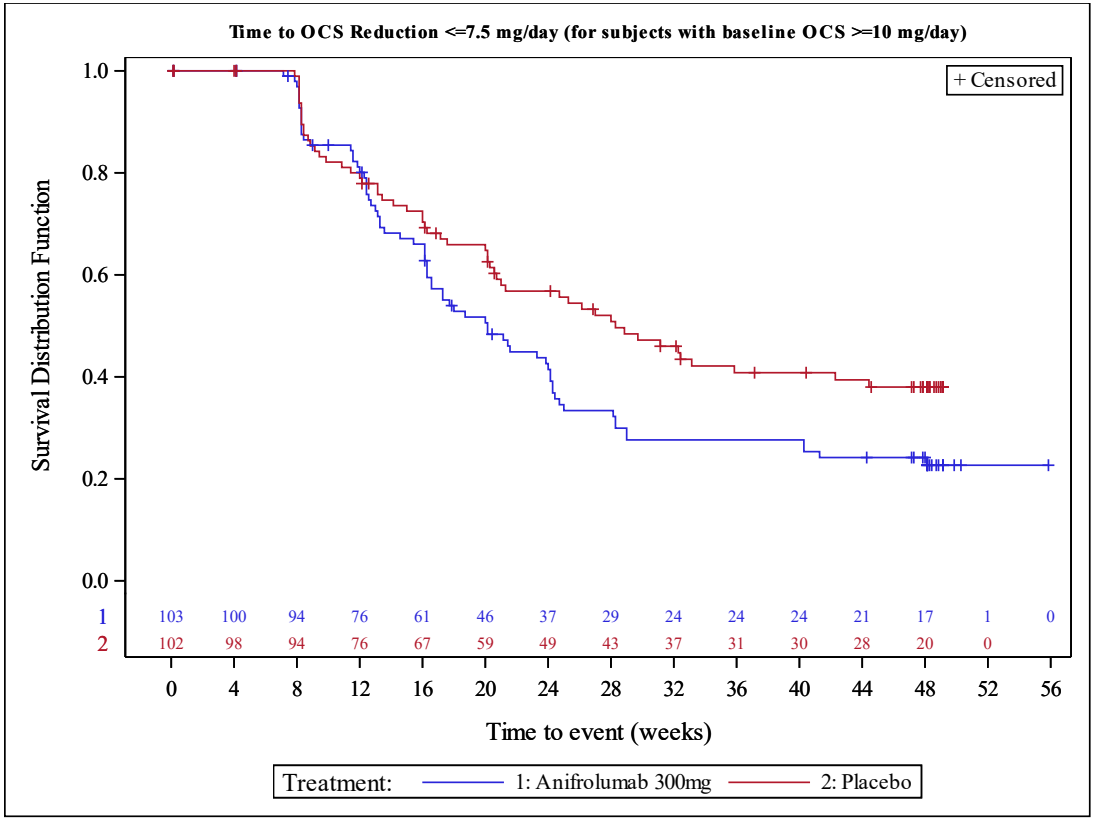
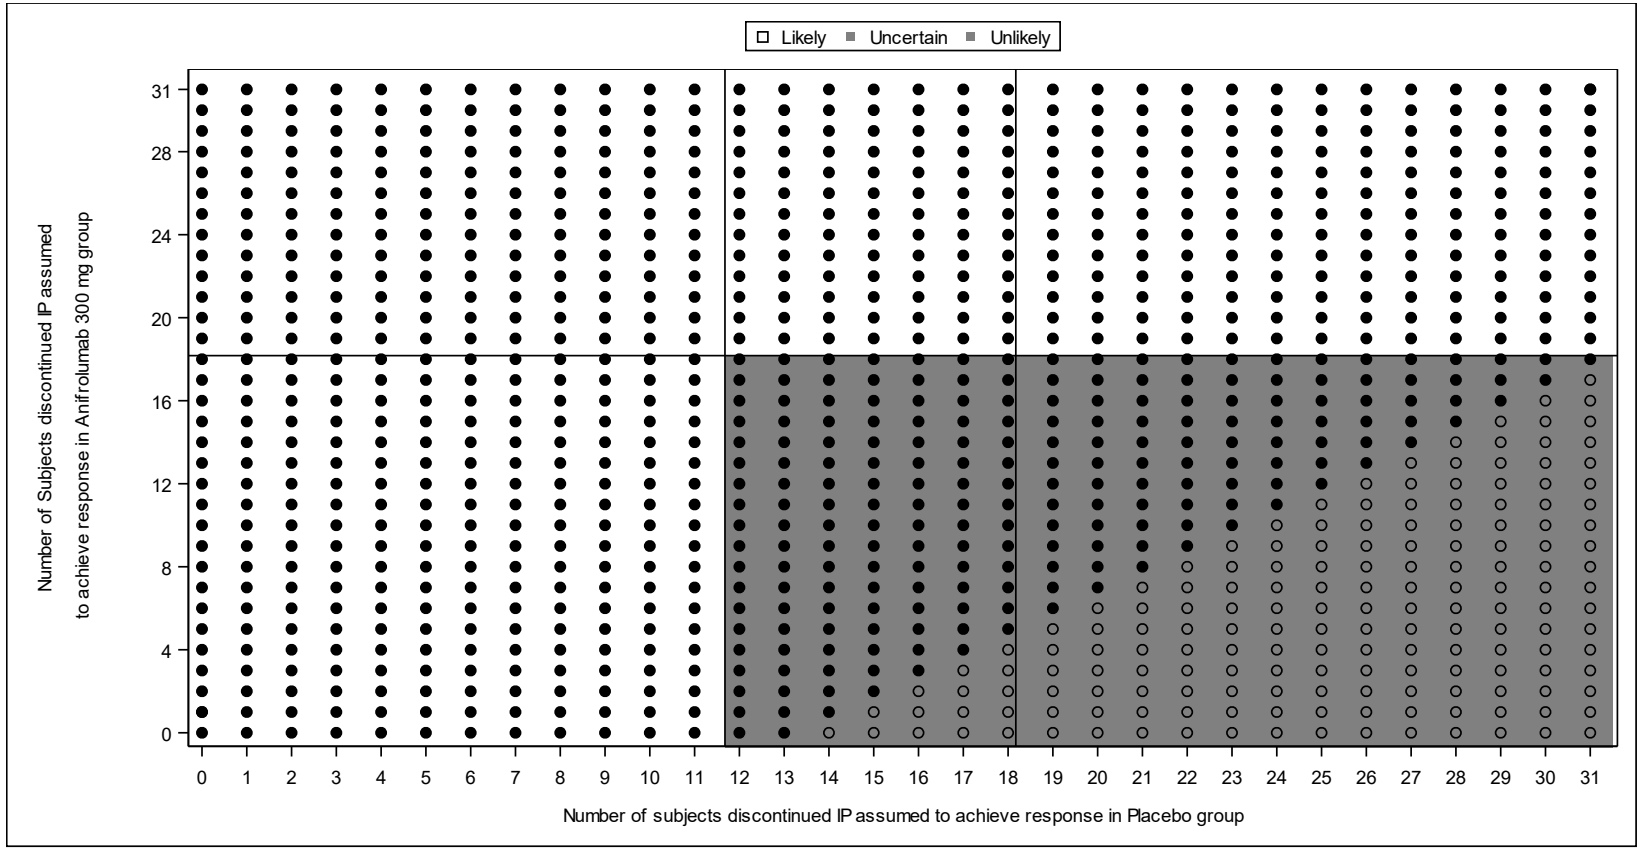
Kaplan-Meier median with 95% CI based on Brookmeyer-Crowley log(-log) transformation.
Hazard ratios, confidence intervals and 2-sided p-value are calculated from Cox proportional hazards model with factors for treatment and stratification factors.
Two-sided log rank test used.
p-Value for interaction from Cox proportional hazards model with factors for treatment, subgroup, treatment*subgroup interaction and stratfication factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
Kaplan-Meier Plot of Time to OCS Reduction <=7.5 mg/day (for subjects with baseline OCS >=10 mg/day)
Full analysis set



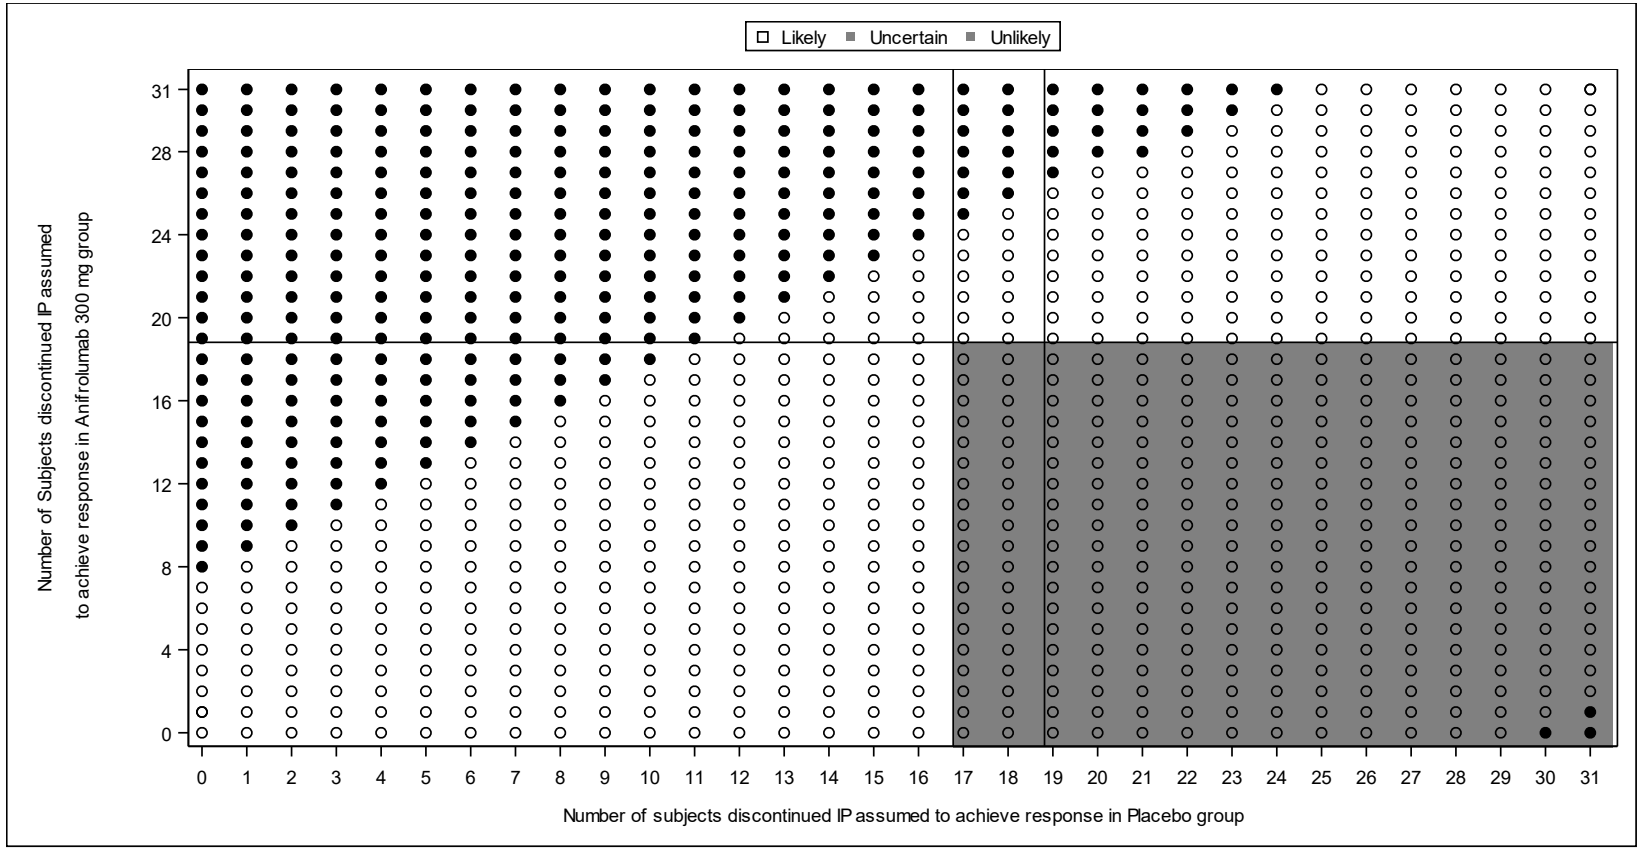
Kaplan-Meier Plots for subgroups are generated if p-value for interaction <0.05

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
Plot of BICLA response rate sensitivity analysis at week 52, tipping point analysis
Full analysis set



Subjects with permanent discontinuation of IP are taken as non-responders at the bottom left grid. A certain number of such subjects from both groups are altered to be responders, while the numbers for both groups are as stated in both axes.
For each scenario, Pearson`s chi-squared test is used to compare the proportion of subjects achieving response at Week 52. The dots are presenting the results: filled = p-value <0.05, open = p-value >=0.05.
The three colors area indicate the tipping point area: white=likely, bright grey=uncertain, darker grey=Unlikely.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
Plot of SRI (4) response rate sensitivity analysis at week 52, tipping point analysis
Full analysis set



Subjects with permanent discontinuation of IP are taken as non-responders at the bottom left grid. A certain number of such subjects from both groups are altered to be responders, while the numbers for both groups are as stated in both axes.
For each scenario, Pearson`s chi-squared test is used to compare the proportion of subjects achieving response at Week 52. The dots are presenting the results: filled = p-value <0.05, open = p-value >=0.05.
The three colors area indicate the tipping point area: white=likely, bright grey=uncertain, darker grey=Unlikely.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
OCS dose increases and cumulative OCS dose until week 52
Full analysis set

		Anifrolumab 300mg (N=180)	Placebo (N=184)	Total (N=364)
Number of dose increases (%)	0	121 (67.2)	118 (64.1)	239 (65.7)
	1	42 (23.3)	28 (15.2)	70 (19.2)

	Mean (SD)	2688.9 (3881.61)	2643.5 (1979.52)	2666.0 (3066.86)
	Median	2022.3	2296.0	2137.5
	Min, Max	0, 35466	0, 9000	0, 35466
AUC up to Week 52 (mg/day)	n (missing)	180 (0)	184 (0)	364 (0)
	Mean (SD)	2906.9 (3866.81)	2913.7 (2132.99)	2910.3 (3109.14)
	Median	2308.4	2668.8	2517.1
	Min, Max	0, 35369	0, 11988	0, 35369

Subjects without any documented dose value regarded as missing values for calculation of cumulative dose and AUC.
AUC defines the cumulative dose normalized for a period of 52 weeks.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event
Full analysis set

	Anifrolumab 300mg (N=180)	Placebo (N=184)
Number of subjects with events, n (%)	161 (89.4)	145 (78.8)
Analysis Anifrolumab 300mg vs. Placebo		
Relative Risk (95% CI)	1.14 (1.04, 1.24)	
p-value	0.0059	
Odds Ratio (95% CI)	2.28 (1.26, 4.12)	
p-value	0.0064	
Risk Difference (95% CI)	10.64 (3.22, 18.06)	
p-value	0.0049	
CMH approach		
Response rate	89.6	78.7
Difference in response rates (95% CI)	10.91 (2.94, 18.88)	
p-value	0.0073	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
Proportion of patients with Adverse Event leading to death

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population

D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Non-Severe MACE
Full analysis set

	Anifrolumab 300mg (N=180)	Placebo (N=184)
Number of subjects with events, n (%)	0 (0.0)	0 (0.0)
Analysis Anifrolumab 300mg vs. Placebo		
Relative Risk (95% CI)	NE	
p-value		
Odds Ratio (95% CI)	NE	
p-value		
Risk Difference (95% CI)	NE	
p-value		
CMH approach		
Response rate	0.0	0.0
Difference in response rates (95% CI)	0.00 (-4.42, 4.42)	
p-value	1.0000	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event of Special Interest (AESI) - Non-Severe Tuberculosis (including latent TB)

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event of SOCs Cardiac disorders and/or Vascular disorders

Kaplan-Meier median with 95% CI based on Brookmeyer-Crowley log(-log) transformation.
Hazard ratios, confidence intervals and 2-sided p-value are calculated from Cox proportional hazards model with factors for treatment and stratification factors.
Two-sided log rank test used.
p-Value for interaction from Cox proportional hazards model with factors for treatment, subgroup, treatment*subgroup interaction and stratfication factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
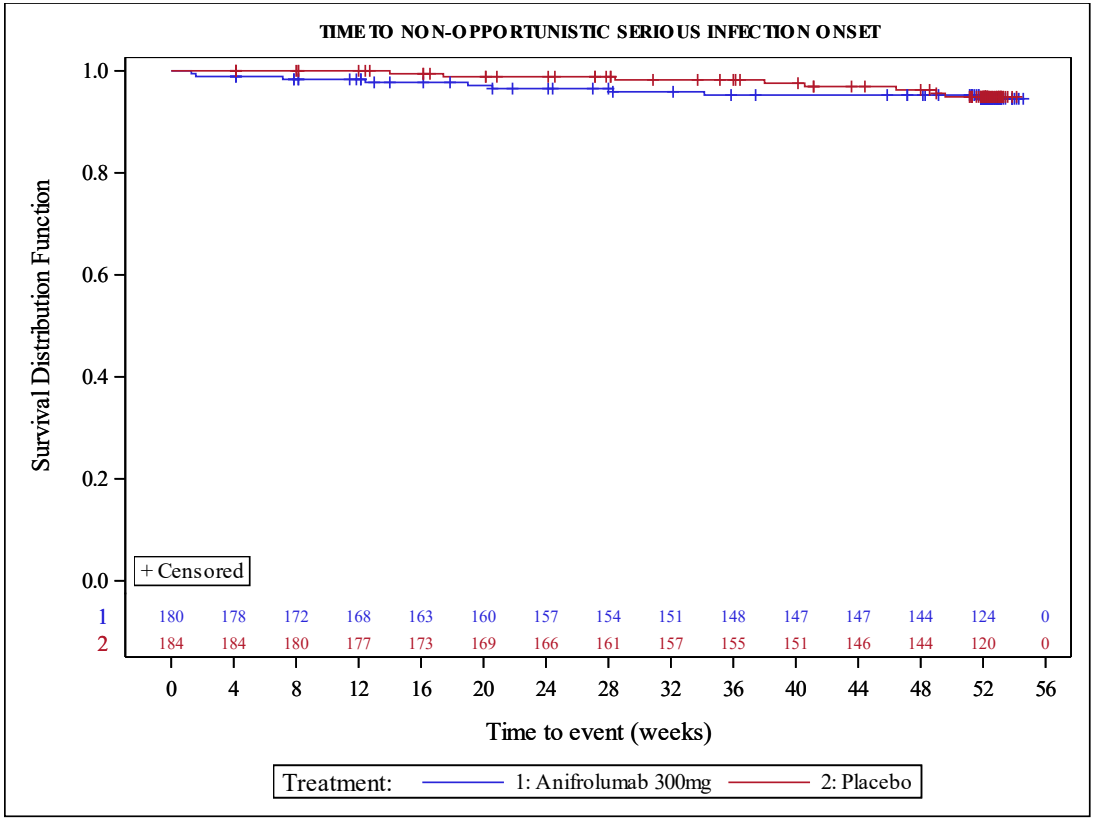
Kaplan-Meier Plot of Time to first Onset of non-opportunistic serious infection (on-treatment)
Full analysis set



Kaplan-Meier Plots for subgroups are generated if p-value for interaction <0.05

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
Summary of Incidence and Time to First Frequent Adverse Events by SOC, PT (incidence in either arm >= 10% or >=10 patients)
Full analysis set

SOC / PT		Anifrolumab 300mg (N=180)	Placebo (N=184)
SOC: Blood and lymphatic system disorders	Number of subjects with events, n (%)	9 (5.0)	15 (8.2)
	Analysis Anifrolumab 300mg vs. Placebo		
	Relative Risk (95% CI)	0.61 (0.28, 1.37)

Summary of Incidence and Time to First Frequent Adverse Events by SOC, PT (incidence in either arm >= 10% or >=10 patients)
Full analysis set

SOC / PT		Anifrolumab 300mg (N=180)	Placebo (N=184)
SOC: Psychiatric disorders	Number of subjects with events, n (%)	14 (7.8)	20 (10.9)
	Analysis Anifrolumab 300mg vs. Placebo		
	Relative Risk (95% CI)	0.72 (0.37, 1.37)	
	p-value	0.3139	
	Odds Ratio (95% CI)	0.69 (0.34, 1.42)	
	p-value	0.3129	
	Risk Difference (95% CI)	-3.09 (-9.05, 2.87)	
	p-value	0.3094	
	CMH approach		
	Response rate	7.8	11.0
	Difference in response rates (95% CI)	-3.20 (-10.09, 3.69)	
	p-value	0.3625	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 84 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
Proportion of patients with at least one Adverse Event of Special Interest (AESI) (on-treatment) - Non-Severe Tuberculosis (including latent TB)
Full analysis set

	Anifrolumab 300mg (N=180)	Placebo (N=184)
Number of subjects with events, n (%)	1 (0.6)	1 (0.5)
Analysis Anifrolumab 300mg vs. Placebo		
Relative Risk (95% CI)	1.02 (0.06, 16.22)	
p-value	0.9876	
Odds Ratio (95% CI)	1.02 (0.06, 16.47)	
p-value	0.9876	
Risk Difference (95% CI)	0.01 (-1.51, 1.53)	
p-value	0.9876	
CMH approach		
Response rate	0.6	0.5
Difference in response rates (95% CI)	0.03 (-4.61, 4.67)	
p-value	0.9891	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 28 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)

Anifrolumab (MEDI-546)
D3461C00005 (TULIP SLE Study 1) - Anifrolumab 300mg vs. Placebo population
Summary of Incidence and Time to First Frequent Adverse Events by SOC, PT (incidence in either arm >= 10% or >=10 patients) (on-treatment)
Full analysis set

SOC / PT		Anifrolumab 300mg (N=180)	Placebo (N=184)
SOC: Respiratory, thoracic and mediastinal disorders	Number of subjects with events, n (%)	32 (17.8)	25 (13.6)
	Analysis Anifrolumab 300mg vs. Placebo		
	Relative Risk (95% CI)	1.31 (0.81, 2.12)	
	p-value	0.2734	
	Odds Ratio (95% CI)	1.38 (0.78, 2.43)	
	p-value	0.2726	
	Risk Difference (95% CI)	4.19 (-3.27, 11.65)	
	p-value	0.2711	
	CMH approach		
	Response rate	17.8	13.7
	Difference in response rates (95% CI)	4.09 (-3.94, 12.12)	
	p-value	0.3180	

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 28 days.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 28 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Analysis includes all AE with a date of onset >= day of first dose of investigational product and <= date of last dose of investigational product + 28 days.
Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochranes Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Timepoint		Anifrolumab 300mg (N=180)	Placebo (N=182)
Week 48	Number of subjects with events, n (%)	100 (55.6)	78 (42.9)
	Analysis Anifrolumab 300mg vs. Placebo (stratified)		
	Relative Risk (95% CI)	1.31 (1.06, 1.62)	
	p-value	0.0127	
	Odds Ratio (95% CI)	1.72 (1.13, 2.62)	
	p-value	0.0119	
	Risk Difference (95% CI)	13.16 (3.04, 23.28)	
	p-value	0.0108	
	Analysis Anifrolumab 300mg vs. Placebo (unstratified)		
	Relative Risk (95% CI)	1.30 (1.05, 1.60)	
	p-value	0.0168	
	Odds Ratio (95% CI)	1.67 (1.10, 2.53)	
	p-value	0.0160	
	Risk Difference (95% CI)	12.70 (2.48, 22.92)	
	p-value	0.0149	
	CMH approach		
	Response rate	55.6	42.7
	Difference in response rates (95% CI)	12.90 (2.70, 23.09)	
	p-value	0.0131	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population

	p-value	0.0004	

For each outcome and visit, 100 imputations were generated by randomised treatment group. Each imputed dataset was analysed separately, and the single estimates are combined using PROC MIANALYZE. The estimated number of responders and non-responders are rounded to an integer. Therefore, there might be slight mismatches between number of subjects and corresponding percentage.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)

Week 52	Number of subjects with events, n (%)	125 (69.4)	94 (51.6)
	Analysis Anifrolumab 300mg vs. Placebo (stratified)		
	Relative Risk (95% CI)	1.34 (1.13, 1.59)	
	p-value	0.0008	
	Odds Ratio (95% CI)	2.08 (1.36, 3.19)	
	p-value	0.0008	
	Risk Difference (95% CI)	17.64 (7.62, 27.67)	
	p-value	0.0006	
	Analysis Anifrolumab 300mg vs. Placebo (unstratified)		
	Relative Risk (95% CI)	1.34 (1.13, 1.59)	
	p-value	0.0007	
	Odds Ratio (95% CI)	2.13 (1.38, 3.27)	
	p-value	0.0006	
	Risk Difference (95% CI)	17.80 (7.90, 27.70)	
	p-value	0.0004	
	CMH approach		
	Response rate	69.4	51.6
	Difference in response rates (95% CI)	17.71 (7.73, 27.68)	
	p-value	0.0005	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
No worsening in BILAG-2004 (>=1A or >=2B compared to BL) at week 52 - Subgroup analysis
Full analysis set

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

	p-value	0.0013	

For each outcome and visit, 100 imputations were generated by randomised treatment group. Each imputed dataset was analysed separately, and the single estimates are combined using PROC MIANALYZE. The estimated number of responders and non-responders are rounded to an integer. Therefore, there might be slight mismatches between number of subjects and corresponding percentage.
Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Relative Risk estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
p-Value for interaction from test for heterogeneity of the relative risks in the subgroups using Cochrane>s Q statistic.
Stratification factors for CMH approach: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

SRI (5) response rate at week 52
Full analysis set

Timepoint		Anifrolumab 300mg (N=180)	Placebo (N=181)
Week 52	Number of subjects with events, n (%)	79 (43.9)	51 (28.2)
	Analysis Anifrolumab 300mg vs. Placebo (stratified)		
	Relative Risk (95% CI)	1.58 (1.19, 2.09)	
	p-value	0.0016	
	Odds Ratio (95% CI)	2.08 (1.33, 3.25)	
	p-value	0.0013	
	Risk Difference (95% CI)	16.12 (6.50, 25.73)	
	p-value	0.0010	
	Analysis Anifrolumab 300mg vs. Placebo (unstratified)		
	Relative Risk (95% CI)	1.56 (1.17, 2.07)	
	p-value	0.0023	
	Odds Ratio (95% CI)	1.99 (1.29, 3.09)	
	p-value	0.0020	
	Risk Difference (95% CI)	15.71 (5.94, 25.48)	
	p-value	0.0016	
	CMH approach		
	Response rate	44.0	28.1
	Difference in response rates (95% CI)	15.94 (6.11, 25.76)	
	p-value	0.0015	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
SRI (6) response rate at week 52
Full analysis set

Timepoint		Anifrolumab 300mg (N=180)	Placebo (N=181)
Week 52	Number of subjects with events, n (%)	79 (43.9)	48 (26.5)
	Analysis Anifrolumab 300mg vs. Placebo (stratified)		
	Relative Risk (95% CI)	1.67 (1.25, 2.24)	
	p-value	0.0005	
	Odds Ratio (95% CI)	2.26 (1.44, 3.55)	
	p-value	0.0004	
	Risk Difference (95% CI)	17.73 (8.18, 27.28)	
	p-value	0.0003	
	Analysis Anifrolumab 300mg vs. Placebo (unstratified)		
	Relative Risk (95% CI)	1.65 (1.23, 2.22)	
	p-value	0.0008	
	Odds Ratio (95% CI)	2.17 (1.39, 3.37)	
	p-value	0.0006	
	Risk Difference (95% CI)	17.37 (7.68, 27.06)	
	p-value	0.0004	
	CMH approach		
	Response rate	44.0	26.4
	Difference in response rates (95% CI)	17.55 (7.79, 27.31)	
	p-value	0.0004	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
SRI (7) response rate at week 52
Full analysis set

Timepoint		Anifrolumab 300mg (N=167)	Placebo (N=169)
Week 52	Number of subjects with events, n (%)	56 (33.5)	34 (20.1)
	Analysis Anifrolumab 300mg vs. Placebo (stratified)		
	Relative Risk (95% CI)	1.67 (1.16, 2.42)	
	p-value	0.0063	
	Odds Ratio (95% CI)	2.02 (1.23, 3.33)	
	p-value	0.0056	
	Risk Difference (95% CI)	13.48 (4.13, 22.83)	
	p-value	0.0047	
	Analysis Anifrolumab 300mg vs. Placebo (unstratified)		
	Relative Risk (95% CI)	1.67 (1.15, 2.41)	
	p-value	0.0066	
	Odds Ratio (95% CI)	2.00 (1.22, 3.28)	
	p-value	0.0059	
	Risk Difference (95% CI)	13.41 (4.04, 22.78)	
	p-value	0.0050	
	CMH approach		
	Response rate	33.6	20.0
	Difference in response rates (95% CI)	13.58 (3.99, 23.17)	
	p-value	0.0055	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
BICLA response rate sensitivity analysis using modified BILAG at week 52
Full analysis set

Timepoint		Anifrolumab 300mg (N=180)	Placebo (N=182)
Week 52	Number of subjects with events, n (%)	93 (51.7)	62 (34.1)
	Analysis Anifrolumab 300mg vs. Placebo (stratified)		
	Relative Risk (95% CI)	1.51 (1.18, 1.93)	
	p-value	0.0010	
	Odds Ratio (95% CI)	2.06 (1.35, 3.15)	
	p-value	0.0008	
	Risk Difference (95% CI)	17.52 (7.45, 27.59)	
	p-value	0.0006	
	Analysis Anifrolumab 300mg vs. Placebo (unstratified)		
	Relative Risk (95% CI)	1.52 (1.19, 1.94)	
	p-value	0.0009	
	Odds Ratio (95% CI)	2.07 (1.35, 3.16)	
	p-value	0.0008	
	Risk Difference (95% CI)	17.60 (7.57, 27.64)	
	p-value	0.0006	
	CMH approach		
	Response rate	51.7	34.2
	Difference in response rates (95% CI)	17.50 (7.43, 27.57)	
	p-value	0.0007	

Relative Risks, Odds Ratios and Risk Differences estimated using Mantel-Haenszel method. Confidence limits and p-value calculated using normal approximation (Wald)
The responder rates (percentages), the difference in estimates and associated 95% CI are weighted and are calculated using a stratified CMH approach, with stratification factors.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

Anifrolumab (MEDI-546)
D3461C00004 (TULIP SLE Study 2) - Anifrolumab 300mg vs. Placebo population
BICLA response rate sensitivity analysis excluding subjects with no BILAG A or B or PGA VAS score >2.7 at baseline at week 52
Full analysis set

Timepoint		Anifrolumab 300mg (N=178)	Placebo (N=182)
Week 52	Number of subjects with events, n (%)	86 (48.3)	57 (31.3)
	Analysis Anifrolumab 300mg vs. Placebo (stratified)		
	Relative Risk (95% CI)	1.53 (1.18, 2.00)

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].

At least one positive/abnormal	122	-0.04 (0.13)	101	0.14 (0.14)	-0.18 (0.15)	(-0.47, 0.12)	0.2331	-0.13 (0.13)	(-0.39, 0.14)	0.3388	

A repeated measures model with fixed effects for baseline value, treatment group, visit, treatment*visit interaction and stratification factors was used.
Overall treatment estimates are displayed.
N defines number of subjects included in the repeated measures model.
An approximate standard deviation was calculated for each arm based on the standard error of the LS mean to obtain the pooled standard deviation for Hedges g.
p-Value for interaction from test for heterogeneity of the mean differences in the subgroups using Cochranes Q statistic.
Stratification factors: SLEDAI-2K score at screening [<10 points vs >= 10 points], Week 0 OCS dose [<10 mg/day vs >=10 mg/day prednisone or equivalent] and type I IFN gene signature test result at screening [high vs low].
