Abbreviations: EORTC QLQ-C30, European Organization for Research and Treatment of Cancer Quality of Life Questionnaire-C30; Max, maximum; Min, minimum; Q1, first quartile; Q3, third quartile; SD, standard deviation.

Only patients with data at both baseline and corresponding postbaseline visit are included in the summary statistics for change from baseline.

The EORTC QLQ-C30 incorporates nine multi-item scales: five functional scales (Physical, Role, Cognitive, Emotional and Social Functioning); three symptom scales (Fatigue,Pain and Nausea/Vomiting); and a Global Health Status/QoL scale. Six single item scales are also included (Dyspnoea, Insomnia, Appetite Loss, Constipation, Diarrhoea and Financial Difficulties).

Leading to Dose Reduction	0 (0.0)	0 (0.0)	0 (0.0)

Source: ADSL,ADAE. Data cutoff: 04MAY2022. Data extraction: 31MAY2022.

Abbreviation: TEAE, treatment emergent adverse event.

Percentages are based on N for each gender group or total.

TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Notes: Adverse events were classified based on MedDRA Version 24.0.

Adverse event grades are evaluated based on NCI-CTCAE Version 4.03.

Abbreviation: TEAE, treatment-emergent adverse event.

Percentages are based on N for each gender group or total.

TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Source: ADSL, ADAE. Data cutoff: 04MAY2022. Data extraction: 31MAY2022.

Abbreviation: TEAE, treatment-emergent adverse event.

Percentages are based on N for each age group or total.

The total column is not the total of all four age subgroups; it is the total of the subgroups < 65 years and ≥ 65 years, which is equivalent to the total of the subgroups < 75 years and ≥ 75 years.

TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Abbreviation: TEAE, treatment-emergent adverse event.
Percentages are based on N for each ECOG group or total.
TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).
Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.
AE terms with n=0 are not shown in the table.

Abbreviation: TEAE, treatment-emergent adverse event.

Percentages are based on N for each prior line of therapy group or total.

TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Abbreviation: TEAE, treatment-emergent adverse event; MALT, Extranodal Marginal Zone Lymphoma of Mucosa-associated Lymphoid Tissue; NMZL, Nodal Marginal Zone Lymphoma; SMZL, Splenic Marginal Zone Lymphoma.

Percentages are based on N for each MZL subtype or total.

TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Abbreviation: TEAE, treatment-emergent adverse event.

Percentages are based on N for each geographic region group or total.

TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Adverse event grades are evaluated based on NCI-CTCAE Version 4.03.

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Table 14.3.1.2.7.3.2:
TEAE of Special Interest of Grade 2 or Lower by Category and Preferred Term and by Age
Safety Analysis Set

	Zanubrutinib (N = 68)				
TEAE of Special Interest Category **Preferred Term**	**< 65 years (N = 27) n (%)**	**≥ 65 years (N = 41) n (%)**	**< 75 years (N = 49) n (%)**	**≥ 75 years (N = 19) n (%)**	**Total (N = 68) n (%)**
Patients with at Least One Grade 2 or Lower TEAE of Special Interest	19 (70.4)	29 (70.7)	36 (73.5)	12 (63.2)	48 (70.6)
Anemia	1 (3.7)	1 (2.4)	2 (4.1)	0 (0.0)	2 (2.9)
Anaemia	1 (3.7)	1 (2.4)	2 (4.1)	0 (0.0)	2 (2.9)
Atrial Fibrillation and Flutter	0 (0.0)	1 (2.4)	1 (2.0)	0 (0.0)	1 (1.5)
Atrial flutter	0 (0.0)	1 (2.4)	1 (2.0)	0 (0.0)	1 (1.5)

Source: ADSL, ADAE. Data cutoff: 04MAY2022. Data extraction: 31MAY2022.

Abbreviation: TEAE, treatment-emergent adverse event.

Percentages are based on N for each age group or total.

The total column is not the total of all four age subgroups; it is the total of the subgroups < 65 years and ≥ 65 years, which is equivalent to the total of the subgroups < 75 years and ≥ 75 years.

TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Adverse event grades are evaluated based on NCI-CTCAE Version 4.03.

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Percentages are based on N for each age group or total.

The total column is not the total of all four age subgroups; it is the total of the subgroups < 65 years and ≥ 65 years, which is equivalent to the total of the subgroups < 75 years and ≥ 75 years.

TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Adverse event grades are evaluated based on NCI-CTCAE Version 4.03.

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Abbreviation: TEAE, treatment-emergent adverse event.

Percentages are based on N for each prior line of therapy group or total.

TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Adverse event grades are evaluated based on NCI-CTCAE Version 4.03.

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Source: ADSL, ADAE. Data cutoff: 04MAY2022. Data extraction: 31MAY2022.

Abbreviation: TEAE, treatment-emergent adverse event; MALT, Extranodal Marginal Zone Lymphoma of Mucosa-associated Lymphoid Tissue; NMZL, Nodal Marginal Zone Lymphoma; SMZL, Splenic Marginal Zone Lymphoma.

Percentages are based on N for each MZL subtype or total.

TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Adverse event grades are evaluated based on NCI-CTCAE Version 4.03.

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Source: ADSL, ADAE. Data cutoff: 04MAY2022. Data extraction: 31MAY2022.

Abbreviation: TEAE, treatment-emergent adverse event.

Percentages are based on N for each geographic region group or total.

TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Adverse event grades are evaluated based on NCI-CTCAE Version 4.03.

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Prostate cancer	0 (0.0)	1 (2.4)	0 (0.0)	1 (5.3)	1 (1.5)

Source: ADSL, ADAE. Data cutoff: 04MAY2022. Data extraction: 31MAY2022.

Abbreviation: TEAE, treatment-emergent adverse event.

Percentages are based on N for each age group or total.

The total column is not the total of all four age subgroups; it is the total of the subgroups < 65 years and ≥ 65 years, which is equivalent to the total of the subgroups < 75 years and ≥ 75 years.

TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Adverse event grades are evaluated based on NCI-CTCAE Version 4.03.

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Adverse event grades are evaluated based on NCI-CTCAE Version 4.03.

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Source: ADSL, ADAE. Data cutoff: 04MAY2022. Data extraction: 31MAY2022.

Abbreviation: TEAE, treatment-emergent adverse event.

Percentages are based on N for each geographic region group or total.

TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Adverse event grades are evaluated based on NCI-CTCAE Version 4.03.

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Abbreviation: TEAE, treatment-emergent adverse event.

Percentages are based on N for each ECOG group or total.

TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Abbreviation: TEAE, treatment-emergent adverse event.

Percentages are based on N for each geographic region group or total.

TEAE is defined as an AE that had an onset date or a worsening in severity from baseline (pre-treatment) on or after the first dose of study drug up to 30 days following study drug discontinuation or initiation of a new anticancer therapy. Worsening of an event to Grade 5 beyond day 30 after last dose of study of a treatment-emergent adverse event is also considered a treatment-emergent adverse event (if it is prior to new anticancer therapy start).

Patients with multiple events for a given preferred term and TEAE of special interest category are counted only once for each preferred term and TEAE of special interest category, respectively.

AE terms with n=0 are not shown in the table.

Observation period of ORR is defined as the time from the first dose to last disease assessment timepoint.
Observation period of PFS is defined as the time from the first dose to last disease assessment/death.
Observation period of OS is defined as the time from the first dose to death/last known alive date.
Observation period of AE is defined as the treatment-emergent period.

Grade 3	0 (0.0)	1 (10.0)	1 (5.0)

Data cut-off: 02OCT2020; Data extraction: 09NOV2020; Data Source: ADSL, ADAE
Abbreviations: MZL, Marginal zone lymphoma; TEAE, treatment emergent adverse event.
Patients with multiple events for a given preferred term and category are counted only once at the worst severity for the preferred term and category, respectively.
Events are first sorted by category alphabetically, then by decreasing frequency of preferred term in the last column.
Adverse event grades are evaluated based on NCI-CTCAE (version 4.03). MedDRA Version 23.0. AE terms with n=0 are not shown in the table.

Abbreviations: MZL, Marginal zone lymphoma; TEAE, treatment emergent adverse event.
Patients with multiple events for a given preferred term and category are counted only once at the worst severity for the preferred term and category, respectively.
Events are first sorted by category alphabetically, then by decreasing frequency of preferred term in the last column.
The total column is not the total of all four age subgroups; it is the total of the subgroups < 65 years and >= 65 years, which is equivalent to the total of the subgroups < 75 years and >= 75 years.
Adverse event grades are evaluated based on NCI-CTCAE (version 4.03). MedDRA Version 23.0. AE terms with n=0 are not shown in the table.

Data cut-off: 02OCT2020; Data extraction: 09NOV2020; Data Source: ADSL, ADAE
Abbreviations: MZL, Marginal zone lymphoma; TEAE, treatment emergent adverse event.
Patients with multiple events for a given preferred term and category are counted only once for each preferred term and category, respectively.
Events are first sorted by category alphabetically, then by decreasing frequency of preferred term in the last column.
Adverse event grades are evaluated based on NCI-CTCAE (version 4.03). MedDRA Version 23.0. AE terms with n=0 are not shown in the table.

Abbreviations: MZL, Marginal zone lymphoma; TEAE, treatment emergent adverse event.
Patients with multiple events for a given preferred term and category are counted only once for each preferred term and category, respectively.
Events are first sorted by category alphabetically, then by decreasing frequency of preferred term in the last column.
The total column is not the total of all four age subgroups; it is the total of the subgroups < 65 years and >= 65 years, which is equivalent to the total of the subgroups < 75 years and >= 75 years.
Adverse event grades are evaluated based on NCI-CTCAE (version 4.03). MedDRA Version 23.0. AE terms with n=0 are not shown in the table.

Min, Max	4.1, 58.3
PFS by Investigator (months)	
n	20
Mean (SD)	28.48 (14.150)
Median	28.63
Q1, Q3	20.40, 34.12
Min, Max	5.4, 58.3
OS (months)	
n	20
Mean (SD)	39.05 (14.232)
Median	39.24
Q1, Q3	33.58, 43.78
Min, Max	8.3, 62.2
AE (months)	
n	20
Mean (SD)	29.41 (17.255)
Median	33.58
Q1, Q3	11.10, 39.93
Min, Max	4.8, 60.8

Data cut-off: 31MAR2021; Data extraction: 03MAY2021; Data Source: ADSL, ADTTE, ADRS
Observation period of ORR is defined as the time from the first dose to last disease assessment timepoint.
Observation period of PFS is defined as the time from the first dose to last disease assessment/death.
Observation period of OS is defined as the time from the first dose to death/last known alive date.
Observation period of AE is defined as the treatment-emergent period.

Percentages are based on N, unless otherwise specified.
The total column is not the total of all four age subgroups; it is the total of the subgroups < 65 years and >= 65 years, which is equivalent to the total of the subgroups < 75 years and >= 75 years.

[a] Median follow-up time was estimated by the reverse Kaplan-Meier method with 95% CIs estimated using the method of Brookmeyer and Crowley.

[b] Medians and other quartiles were estimated by Kaplan-Meier method with 95% CIs estimated using the method of Brookmeyer and Crowley.

[c] Event free rates were estimated by Kaplan-Meier method with 95% CIs estimated using the Greenwood's formula.

Data cut-off: 31MAR2021; Data extraction: 03MAY2021; Data Source: ADSL, ADAE
Abbreviations: MZL, Marginal zone lymphoma; TEAE, treatment emergent adverse event.
Patients with multiple events for a given preferred term and category are counted only once at the worst severity for the preferred term and category, respectively.
Events are first sorted by category alphabetically, then by decreasing frequency of preferred term in the last column.
Adverse event grades are evaluated based on NCI-CTCAE (version 4.03). MedDRA Version 23.0. AE terms with n=0 are not shown in the table.

Data cut-off: 31MAR2021; Data extraction: 03MAY2021; Data Source: ADSL, ADAE
Abbreviations: MZL, Marginal zone lymphoma; TEAE, treatment emergent adverse event.
Patients with multiple events for a given preferred term and category are counted only once at the worst severity for the preferred term and category, respectively.
Events are first sorted by category alphabetically, then by decreasing frequency of preferred term in the last column.
Adverse event grades are evaluated based on NCI-CTCAE (version 4.03). MedDRA Version 23.0. AE terms with n=0 are not shown in the table.

Data cut-off: 31MAR2021; Data extraction: 03MAY2021; Data Source: ADSL, ADAE
Abbreviations: MZL, Marginal zone lymphoma; TEAE, treatment emergent adverse event.
Patients with multiple events for a given preferred term and category are counted only once at the worst severity for the preferred term and category, respectively.
Events are first sorted by category alphabetically, then by decreasing frequency of preferred term in the last column.
The total column is not the total of all four age subgroups; it is the total of the subgroups < 65 years and >= 65 years, which is equivalent to the total of the subgroups < 75 years and >= 75 years.
Adverse event grades are evaluated based on NCI-CTCAE (version 4.03). MedDRA Version 23.0. AE terms with n=0 are not shown in the table.

Patients with multiple events for a given preferred term and category are counted only once at the worst severity for the preferred term and category, respectively.
Events are first sorted by category alphabetically, then by decreasing frequency of preferred term in the last column.
Adverse event grades are evaluated based on NCI-CTCAE (version 4.03). MedDRA Version 23.0. AE terms with n=0 are not shown in the table.

Haemorrhoidal haemorrhage	0 (0.0)	1 (10.0)	1 (5.0)
Increased tendency to bruise	0 (0.0)	1 (10.0)	1 (5.0)

Data cut-off: 31MAR2021; Data extraction: 03MAY2021; Data Source: ADSL, ADAE
Abbreviations: MZL, Marginal zone lymphoma; TEAE, treatment emergent adverse event.
Patients with multiple events for a given preferred term and category are counted only once for each preferred term and category, respectively.
Events are first sorted by category alphabetically, then by decreasing frequency of preferred term in the last column.
Adverse event grades are evaluated based on NCI-CTCAE (version 4.03). MedDRA Version 23.0. AE terms with n=0 are not shown in the table.

Thrombocytopenia	0 (0.0)	1 (6.3)	0 (0.0)	1 (25.0)	1 (5.0)

Data cut-off: 31MAR2021; Data extraction: 03MAY2021; Data Source: ADSL, ADAE
Abbreviations: MZL, Marginal zone lymphoma; TEAE, treatment emergent adverse event.
Patients with multiple events for a given preferred term and category are counted only once for each preferred term and category, respectively.
Events are first sorted by category alphabetically, then by decreasing frequency of preferred term in the last column.
The total column is not the total of all four age subgroups; it is the total of the subgroups < 65 years and >= 65 years, which is equivalent to the total of the subgroups < 75 years and >= 75 years.
Adverse event grades are evaluated based on NCI-CTCAE (version 4.03). MedDRA Version 23.0. AE terms with n=0 are not shown in the table.

Serious Treatment-Emergent Adverse Events of Special Interest by Category and Preferred Term and by ECOG Performance Status
(MZL Safety Analysis Set)

	Zanubrutinib (N = 20)		
Category **Preferred Term**	**0** **(N = 7)** **n (%)**	**>= 1** **(N = 13)** **n (%)**	**Total** **(N = 20)** **n (%)**
Infections	2 (28.6)	2 (15.4)	4 (20.0)
Pneumonia	1 (14.3)	1 (7.7)	2 (10.0)
Carbuncle	1 (14.3)	0 (0.0)	1 (5.0)
Clostridium difficile colitis	0 (0.0)	1 (7.7)	1 (5.0)
Escherichia sepsis	0 (0.0)	1 (7.7)	1 (5.0)
Gastroenteritis	1 (14.3)	0 (0.0)	1 (5.0)
Influenza	0 (0.0)	1 (7.7)	1 (5.0)
Pyelonephritis	1 (14.3)	0 (0.0)	1 (5.0)
Skin infection	0 (0.0)	1 (7.7)	1 (5.0)
Second primary malignancies	0 (0.0)	1 (7.7)	1 (5.0)
Invasive ductal breast carcinoma	0 (0.0)	1 (7.7)	1 (5.0)

Data cut-off: 31MAR2021; Data extraction: 03MAY2021; Data Source: ADSL, ADAE
Abbreviations: MZL, Marginal zone lymphoma; TEAE, treatment emergent adverse event.
Patients with multiple events for a given preferred term and category are counted only once for each preferred term and category, respectively.
Events are first sorted by category alphabetically, then by decreasing frequency of preferred term in the last column.
MedDRA Version 23.0. AE terms with n=0 are not shown in the table.
